Aug 2012

## ACKNOWLEDGEMENT

This report marks the end of the 2010 Population Census Project, at least the first phase, and I want to thank all the people (and agencies) involved from the initial stage of the census preparation up to this point in time. I want to thank SPC for its readiness to assist the NSO in this project as well as the donors-AUSAID and UNFPA for their funding support. On a personal level I want to extend my thanks to Mrs Jenny Tonganibeia for the overall supervision of this population census, and her hardworking assistants: Tebukabane Toki and Mrs Teimaro Boutu. A lot of temporary staff and field workers, including census supervisors and enumerators, were recruited and I want to thank each and everyone of them for their cooperation and assistance during the census enumeration. We did also enlist the help of island councils, the police, and local communities and we extend our appreciation to them. Lastly I want to thank all the people who have cooperated and answered the many questions of the population census questionnaires. While we acknowledge the burden placed on the respondents during the interviews, it should be clear to all the people that the population census information is for the use and benefit of the government and the people of Kiribati-it is critical information needed for planning and policy formulation purposes. Without the population census we would not know how many people live in Kiribati, and on each island, and we will not know how many youth or children, or how many people above 70 years of age who are entitled to the government "senior citizens benefit". The household information also informs us how many households are without water supply or without decent sanitation facility, etc. All these are important information for proper planning and effective policies. The census information are kept in the NSO and everyone, including international, regional and development partners, can access them. The raw data or unit records however are generally not given to people outside the NSO-in line with the confidential clause of the Statistics Act. Needless to say, the population census project is indeed a large and complex undertaking that requires elaborate planning and organization-it needs a well-designed actionplan detailing out what activities need to be undertaken, by who, and its timelines. All these have been worked out for this 2010 population census project, unfortunately, like everything else in life, unforeseen things can happen, and in this case the census commissioner was unable to finish off this census report because she had to go on maternity leave. And because of the shortage of staff in the NSO I have asked lete Rouatu, the former Republic Statistician (and a census commissioner in the 1990 population census), to assist us in compiling and writing up this report. Mr Rouatu voluntary worked with us for two weeks to put out this report and I want, on behalf of the NSO, to extend our deep gratitude to him.

Ms Aritita Tekaieti
(Deputy Census Commissioner)

## FOREWORD

The National Statistics Office (NSO) strives and continues to support government by providing socio-economic statistics for monitoring and evaluation purposes through population censuses. These socio-economic statistics are also made available to other users such as the businesses, the churches, regional and international organizations.

One of the main sources of demographic and social-economic statistics in Kiribati is the population and housing census. Kiribati has been carrying out population and housing censuses in a "modern sense" at intervals of about five years since 1985. This 2010 Census is the first census to use the GPS to plot the positions of the households.

The manual summaries made by the census staff were used to compile the "preliminary" and "provisional" results which were released within 7-8 months respectively from the end of field enumeration. The provisional results show population by administrative area, by sex, and by village.

This is the census first report-"Census Report Volume 1: Basic Information and Tables". This contains tables produced from CSPRO, the main computer program used in the census. This report shows population distribution and its characteristics, household and personal characteristics, housing characteristics, population growth and selected development indicators. We expect more detailed and subject-oriented analyses of the census data to be undertaken in the next 6-12 months. In addition to these analyses, the NSO Census unit will construct a Census Atlas that will present the spatial distribution of the population and social facilities (e.g. clinics, schools, wells, etc) using maps.

Many institutions and individuals contributed to the success of this census. AUSAID funded the bigger part of the census budget (A\$0.5m), and UNFPA put in AU\$0.3m. The Kiribati government also provided $\mathrm{A} \$ 0.2 \mathrm{~m}$. Many government ministries and institutions collaborated with the NSO Census unit from the planning stage right up to the enumeration stage. After the enumeration, the NSO and SPC focused on the editing and tabulation processes. It is expected that the analyses and further work on the census results will start after the publication of this report. The NSO Census unit is grateful for the support and spirit of collaboration of other ministries and regional organizations. .

I would like to thank the management and staff of the NSO Census unit; TAs from SPC; all island councils including BTC and TUC; the census committee; mapping staff of the Lands department; supervisors and enumerators; and all individuals who responded to our questions.

Finally, I would like to encourage people, in particular decision makers, to use the census data as a basis for the formulation and design of their plans and policies, and to use such evidence in their debate and deliberations. Census information, like all other official statistics, are "public goods" which the NSO Census unit strives to make readily available and accessible to all users who need them.

## 1 Introduction

This report contains tables extracted from the 2010 population census datafile using CSPro with a brief census management report at the beginning. The 2010 Population census follows the 2005 population census and was supervised by Mrs Jenny Tonganibeia, one of the senior staff in the National Statistics Office (NSO). The section on the tables is split between the tables on the population (or personal tables) and the tables on household characteristics/assets/belongings. It is important to bear in mind though that the tables presented in this report are not the only information that can be extracted from the population census datafile-there are infinitely more cross tabulations and information that can be provided from the population census datafile. People needing extra population census information however need to specify their requests clearly so that NSO staff can carry out the required cross tabulations.

It is important to mention here that this is the first population census that uses the GPS to plot the positions of houses, and this can be very useful in mapping out "concentration" of households with particular assets or features or households that lack important facilities/equipment, such as toilet facilities, or waste disposal means. For instance, on S.Tarawa one can map out households, using GPS positions, with "No access to PUB water system", or households with "No toilet facility". While the main mode of census data dissemination is still in tables, the mapping approach is an innovative alternative and can be more "dramatic" and convincing because it is more "visual" and "revealing" than just the array of numbers as in the tables. Unfortunately the small land area of Kiribati and its small population size does not produce very interesting or "dramatic" thematic maps, apart from S.Tarawa which is more densely populated.

In the administrative report section (Part A), the following are described: the census organization, the recruitment and training of census staff, the household listing and demarcation exercise, the enumeration exercise, the data processing system, and the dissemination process. The deputy commissioner's report on the census preparations and the actual enumeration in the Line islands is separately shown and forms part of this administrative report. Part B is the personal tables and Part C is the household tables. The appendices show in detail the census workplan, the census questionnaire, a sample of Betio EA, and the island land areas.

## Part A. Administrative Report

## 2. CENSUS ORGANIZATION

The population census is conducted under the Population Census Ordinance CAP 8. The ordinance stipulates that the Honorable Minister of Finance appoints a census commissioner to manage the census and for the 2010 population census Mrs Jenny Tonganibeia, a senior statistics officer, was appointed by the Honorable Nataan Teewe. Her appointment started on the 6 April 2010 and as in previous censuses, she then
appointed a deputy census commissioner-another senior staff of the NSO (Ms Aritita Tekaieti) to assist her just for conducting the Line Islands Census. As background information, Mrs Aritita Tekaieti was the population census commissioner in the 2005 population census and Mrs Jenny Tongainibeia was the deputy census commissioner, i.e. the roles of the two in the 2010 census have been reversed ${ }^{1}$. Two other NSO staff joined the census project as census assistants: Tebukabane Toki and Teimaro Boututhese two staff have been involved in previous censuses as well.

Fig 1 Population Census Project 2010 Organization

Well over 400 people were involved in the 2010 population census project but most worked for a limited period of time. For instance, the enumerators worked for only two weeks-these are the people who did the actual interviews during the census enumeration period. The supervisors worked for 3 months and the computer operators for about a year. At the end of 2011 all census staff recruited from outside the NSO were laid off-leaving the three 'permanent' staff of the NSO to continue the work on the 2010 census project.

## 3. INITIAL PREPARATIONS

A population census is a fairly large undertaking involving lots of people and a significant budget. It requires elaborate organization and preparation and this is why it is

[^0]necessary to start the preparations well in advance of the actual enumeration date, say two years or at least a year. Unfortunately, preparations for this 2010 census started less than a year before the enumeration took place. This is basically because of the late approval of funds and the uncertainty as whether the census would go ahead or not ${ }^{2}$. Obviously working in a hurry could compromise the scope, coverage, and quality of data collected and it is very possible that the quality of the 2010 population census has been severely compromised-as evident from the very slow processing of the census result. This is rather surprising given that SPC, through a memorandum of understanding with the NSO, was heavily involved in the preparation and execution of the 2010 population census project-unlike previous population censuses where SPC role is confined basically to demographic analysis and specialized trainings. Major preparatory activities for the 2010 population census are described below.

### 3.1 Project formulation and securing of funds

After the appointment of the census commissioner in April 2010, a census project document (prodoc) was drafted and submitted to Cabinet for approval on the $24^{\text {th }}$, August 2009. The prodoc contains the census workplan and the budget and after Cabinet approval, the prodoc was sent back to the National Economic Planning Office (NEPO) for funding consideration. After further consultations, three donors were identified: AUSAID ( $\$ 500,000$ ), UNFPA $(\$ 300,000)$ and the Kiribati government $(200,000)$. For comparison purposes the 1990 population census total budget was $\$ 300,000$, while the 2005 budget was $\$ 500,000$. Indeed the cost of conducting a population census has increased significantly over the years this is basically because of using new innovative approach or new advanced technology like GPS for national household listing purposes and the high transport cost to the islands (including ship charter). The following is the census budget summary as provided by Census Commissioner.

[^1]Summary of Census Budget - 2010
2010 CENSUS EXPENDITURE SUMMARY

| Item of Expenditure |  | Total cost |
| :--- | ---: | ---: |
| 1 Human resources | $\$$ | $386,066.56$ |
| 2 Transport | $\$$ | $58,214.00$ |
| 3 Publicity (Communication Strategy) | $\$$ | $34,170.00$ |
| 4 Equipments and stationery | $\$$ | $166,290.00$ |
| 5 Census Users Meetings | $\$$ | $3,000.00$ |
| 7 Census training workshop | $\$$ | $89,657.00$ |
| 8 Pilot census transport/travel | $\$$ | $15,294.00$ |
| 9 Census Enumeration cost | $\$$ | $45,511.01$ |
| 10 Ship charter | $\$$ | $210,000.00$ |
| 11 Dissemination/Printing | $\$$ | $44,804.01$ |
| 12 GPS Sub \& Flight Costs | $\$$ | $46,560.00$ |
| 14 Contingency | $\$$ | $54,978.33$ |
| TOTAL COSTED ITEMS | $\$$ | $\mathbf{1 , 1 5 4 , 5 4 4 . 9 1}$ |

At the time of writing this report the full and complete account of the 2010 population census project has not been audited.

The census project is divided into five main phases and the $1^{\text {st }}$ and $2^{\text {nd }}$ phases are funded by UNFPA while AUSAID and the Kiribati government funded the rest.

Major phases of the $\mathbf{2 0 1 0}$ population census project

| PHASES | Activities |
| :--- | :--- |
| $1^{\text {st }}$ phase | Census staff recruitment, GPS and computer training, and household listing |
| $2^{\text {nd }}$ phase | Public awareness, questionnaire design, and pilot test |
| $3^{\text {ra }}$ phase | Field staff training (supervisors and enumerators) |
| $4^{4 n}$ phase | Data processing |
| $5^{\text {th }}$ phase | Data dissemination and backup |

All the phases of the population census project are very important in their own right and they require elaborate planning and execution. Evidently a lot of experience and practical skill is required in conducting a population census because most of the work is practical. Theory is not enough and this can be seen in questionnaires that are lengthy, cluttered, and confusing to say the least. Clarity and simplicity are the essence of a good population census questionnaire because it is much better to get a "limited" but good quality information than a vast array of wrong or "useless" information. A population census is indeed a very expensive but very useful "national" activity and it should be managed and conducted by professional and experienced people. If there are errors or mistakes made, they cannot be undone or changed-i.e. they will remain as mistakes for "eternity".

### 3.2 Recruitment and training of census staff

The recruitment of staff for the 2010 population census project started off with the appointment of the census commissioner Ms Jenny Tonganibeia on the 6 April 2010 by
the minister of finance-just 7 months before the actual census enumeration ${ }^{3}$. After the census commissioner appointment, three other NSO staff were assigned to work on the census project: Ms Aritita Tekaeiti (deputy census commissioner), Ms Teimaro Boutu (census assistant) and Tebukabane Toki (census assistant). Then in May 2010 twenty three (23) GPS operators were recruited from S.Tarawa and were given a training on GPS use by a TA from SPC-the training took place at the BTC office for 3 days. The GPS operators plotted the positions of all households in the country and carried out a "fast" count of all the people in each household. This is known as the household listing exercise and provides useful information to the census planners. After the household listing exercise these same GPS operators were given another training on the computer data entry using CSPRO—and subsequently became data entry operators. Another TA from SPC conducted the computer training.

In August 2010 the census commissioner recruited 36 supervisors from Tarawa to carry out the pilot census to test the questionnaire and other census procedures. The enumerators for S.Tarawa were recruited in October 2010 and the minimum qualification was a Form 5 certificate and a good pass in English—this applies to the supervisors as well. A good pass in English is needed in order to get "better" enumerators who can read and understand the census questionnaires which are written in English. It has been noted in the past that some enumerators interpreted the questions wrongly during the interviews-despite the trainings that they have received. It is useful to recall here that some of the earlier censuses actually employed primary teachers as enumerators-and this is basically because of their high command of English language compared to school dropouts.

A sizable portion of the census budget is spent on the recruitment, training, and transport cost of supervisors and enumerators, i.e. field workers. This is because Kiribati uses the "personal interview" or "person-to-person" enumeration method but in more developed countries, questionnaires are simply posted to people to fill in and to return them after they have completed them-this is much cheaper but it requires that the respondents are mature, literate, and responsible. In some countries the internet is used and this is known as eCensus-people would simply fill in the questionnaire online. It may be worth considering these approaches in future censuses, at least in urban areas where people are more literate and have access to the postal and internet services. However a pilot test on any new approach is useful in order to assess the quality, coverage, and completeness of the enumeration done in this way.

[^2]Table A: Comparative No of Supervisors and Enumerators: 1990 and 2010

|  | 1990 Census |  | 2010 Census |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Supervisors | Enumerators | Supervisors | Enumerators |
| Banaba | 0 | 0 | 1 | 0 |

| TOTAL | 52 | 287 | 76 | 362 |

### 3.3 Questionnaire design

Although the population census questions remain basically the same from census to census there is always a need to review the questionnaire before each census in light of recent developments and changes, and in light of complaints or problems noted in past censuses. For instance, the question on the "internet use" was never asked in the previous censuses because there was no internet or the internet use was very limited in those times, but now the internet is one of the standard household questions because many people are using it. Sometimes it may be necessary to drop off some questions that people are no longer interested in, again to give an example, in the 1990 population
census there was a question on the number of ducks and goats, because the agriculture division had brought in some goats in the 1980s to see whether they could be reared here-as it turned out, the goats were becoming more of a nuisance rather than worthwhile household assets, and they were eventually disposed off. The ducks are also on the decline and so the census questionnaires in recent censuses do not incorporate them anymore. Sometimes the questions are reviewed to ensure that the enumerators and the respondents fully understand them. Usually there is a committee or task force set up to review and finalize the questionnaires.

For the 2010 population census project a workshop to review the questionnaire was conducted in August 2010 for three days. The participants include officials from different government ministries and representatives of non-government bodies. The 2005 census questionnaire was used as the initial template and as the basis of the discussion. Several ideas were exchanged but in the end the NSO was tasked to complete the questionnaire taking into account what people have said during the meetings. The NSO subsequently passed on the information to SPC which designed the final questionnaire. A draft of the questionnaire was given to the Planning office to comment on. The questionnaire was further tested in the pilot census.

### 3.4 Pilot census (Questionnaire pre-testing)

The main purpose of the pilot census is to check or test the purpose and clarity of the questions as well as the overall administrative flow of the census operations. However in most cases the pilot test focused more on the questionnaire and on the understanding of the enumerators in asking and interpreting the questions. The idea is that once the questionnaire has been tested and revised, it should be ready for final use in the actual census enumeration.

In the 2010 population census project, 22 people were recruited to carry out the pilot census. Announcement for the job was made on the radios and printed in newspapers. Candidates were required to have passed Form 5 education and should have good pass in English. The selected candidates eventually became census supervisors for S.Tarawa. The pilot census was conducted on N. Tarawa (representing the rural areas or outer islands) and on S.Tarawa (urban) with the assistance of two TAs from SPCfor two weeks (18-27 August 2010). Tabiteuea village was selected in N.Tarawa, and for S.Tarawa, Bikenibeu village was selected. The focus of the pilot test was on the contents of the questionnaire and the workload on the enumerators. The selected candidates (who became supervisors later) also managed to complete the household listing and the enumeration area (EA) demarcations for these two islands. Ten supervisors worked on N Tarawa and 12 were assigned to work in Bikenibeu. Each interviewer was assigned about 10 households to interview and their returned
questionnaires were checked by "senior" supervisors who were appointed by the SPC TAs. The "senior" supervisors also assessed the understanding and capability of the interviewers (candidates) in conducting the interviews with a view to use the experience and the lessons learnt in subsequent trainings of enumerators. The time to conduct an interview and to cover the whole enumeration area was also noted. Ideally the enumerators were expected to complete their enumeration within a few days after the census designated date-to avoid double counting of people. After the pilot census the "senior" supervisors returned the completed questionnaires to the NSO to be coded for computer data entry-again as part of the training or simulation exercise before the actual data entry.

The key findings from the pilot census include:

1) some of the questions in the questionnaire need more clarifications
2) the time to complete the full enumeration of an EA varies-some quite short and some quite long
3) some household numbers that were recorded by the GP operators (in the initial household listing exercise) were wrong

The findings above were subsequently taken into account when finalizing the plan for the actual enumeration and the subsequent data processing.

### 3.5 Household listing and EA demarcation

The objective of the household listing exercise is to systematically list out all the households within an enumeration area (EA)—to ensure that each household within an EA has a unique number for identification purposes-and that no houses are left out. It is a time also to check on the boundaries of the enumeration areas. In some instances, the boundaries could be modified if the number of households is getting too large for one single enumerator to cover during the enumeration period ${ }^{4}$. In the past, each enumerator was expected to enumerate or interview about 60-80 households during the enumeration period. This number is still being used in recent censuses including this 2010 census however there are instances when the number could be higher or lower depending on the population growth or the movement of people. For instance, on some islands, the number of households has decreased following the migration of people to S.Tarawa or to Christmas island. The populations of these two islands continue to show marked increases over the years and sometimes it is necessary to split an existing EA

[^3]into two EAs if the population is getting too big for one enumerator to cover. This is why the EAs on S.Tarawa keeps increasing from one census to another. But as stated, the current practice is to use the EAs of the past censuses, at least as the starting point for the EA demarcation exercise. This is important for cross-checking and consistency purposes.

What is important is to have EAs that are useful, or at least can be used, for planning and administrative purposes. For instance, it is useful to have EAs that when added up together constitute one village or one district or one island. Furthermore, some ministries, especially the ministry of health, and the ministry of education, have their own "districts" which they use for their own work and it would be useful to design population census EAs that support these "districts" demarcations. The other important purpose of the EA demarcation exercise is to ensure no overlap or double counting occurs during the actual enumeration, and that all areas of the country are covered or included. The latter is very important because it implies all space in the country have an EA, even if there are no people in such spaces or localities.

The 2010 population census is unique in that it is the first census where the GPS is used to record the position of the households. This is an innovative approach and one of its main uses is in the dissemination phase, for example, instead of just writing down the village name and the number of households with no water supply, or with no toilet facility, etc, as in the traditional table format, it is possible now to show the map of the island, the village, and the households lacking such essential facilities. This visual representation is more "revealing" and dramatic than just the tables. Unfortunately the mapping effect of the GPS exercise is not very profound in Kiribati because of its wide and scattered geography, and the smallness of the islands. The only islands however that may show interesting maps is S.Tarawa and Christmas island-the others are too small and sparsely populated.

The household listing and demarcation exercise for the 2010 census was undertaken in July 2010. The work is based on the 2005 maps and EAs. On S.Tarawa, the total number of EAs increased to 101 in the 2010 census, compared to 69 in the 2005 census.

### 3.6 Setting up data processing facilities

The data processing preparation started off with the purchase of computers in October 2010-about ten desktop computers and two laptops. The main software used is the CSPRO and the data entry program was designed by SPC in Noumea, New Caledonia. A TA from SPC installed the computer program and trained the computer operatorsthese were the GPS operators who were recruited earlier to carry out the household
listing and the demarcation exercise. The data from the pilot test was used in testing the data entry program.

### 3.7 Public awareness

Making people aware of the importance of a population census is always part of any population census project and in 2010 extensive use of the radio and newspapers were made to raise people's awareness of the census project.

## 4. Enumeration

The population census enumeration in Kiribati is based on a de-facto basis meaning that people residing only in Kiribati at the time of the census will be counted or enumerated-i.e. those temporary overseas will be excluded. While it is important to include all Kiribati people-including those temporary absent, the fact is that it is difficult to enumerate those absent. Furthermore, the principle of a census enumeration is that everyone gets counted at the same time, i.e. on a simultaneous basis, otherwise some people may be counted twice-especially if they moved to another household or location after they have been enumerated in one area. However in practice some islands, especially the very remote islands or people on ships, may not be enumerated at the same as the rest of the country. This could create some problems, especially if there had been movements to these places after the original census date (including births or deaths), however it is presumed that people have not moved since the designated census date. In the 2010 population census, four islands were enumerated after the national census date-Canton island, Tabuaeran (Fanning), Teraina (Washington), and Banaba.
The 2010 population enumeration started on the $7^{\text {th }}$ November 2010, and went on for several days. However, as mentioned above, some islands were enumerated later because of the lack of transport. Further details of the enumeration in Kiribati are given below.

### 4.1 On S.Tarawa

S.Tarawa is the most populated island and the enumeration on it is relatively more difficult than on the other islands. There are more enumeration areas (EAs) and the boundaries are more difficult to locate and follow because there are so many households or houses cluttered in small areas. In the 2010 census there were 148 enumerators which means there were 101 enumeration areas (EA's) as well. The number of supervisors is 36 .

The enumeration on S.Tarawa, and most of the islands in the country, started on the morning of 9th November 2010 and went on for several days. The census commissioner was directly involved in the enumeration on S. Tarawa and on many occasions went out to the field to check on the progress of the census enumeration herself. A double cabin motor vehicle was purchased for the purpose of the population census and this was used to check on the enumerators during the enumeration period, and to collect the completed questionnaires as well. This is the busiest part of the
census project with many census staff coming in and out of the NSO either to return their completed questionnaires or to get advice or assistance. Staff in the NSO checked and sorted the questionnaires ready for the data coding and data entry.

### 4.2 On the outer islands

On the outer islands the enumeration is more straightforward as the houses are not so congested or cluttered as in S.Tarawa-however the main problem is the remoteness and distance of some villages or some households. Usually one village would be designated as a single EA however if the village is "too" big there may be two or three enumerators to conduct the interview and cover the entire village. On some of the larger islands, motorbikes were hired by the supervisors or enumerators to travel to the more distant villages or houses. Sometimes a boat is used to enumerate some of the remote but inhabited islets.

The enumeration on Banaba took place about three weeks after the census designated date. The enumeration was supervised by Tekena Tiroa, the republic statistician, and was assisted by Tebukabane Toki, and several temporary staff. The census staff hired Tetiraoi, a small private vessel, and they spent one day on the island. After they returned, Tebukabane was admitted to the hospital and he was sick for more than a month. Some people reckoned the ship was too small and not very good to travel in.

### 4.3 In the Line islands

The enumeration in the Line islands was supervised by Ms Aritita Tekaieti who was the overall census commissioner in the previous (2005) census. For the 2010 census project, Ms Aritita was designated as the deputy census commissioner and was assigned to supervise the enumeration in the Line islands. The following is her report ${ }^{5}$ on what took place in the Line islands prior to the census date and during the actual census enumeration. She went to Christmas island (via Fiji) in August 2010 and returned in December the same year.

## The Deputy Commissioner's Report for the Line Islands Census 2010:

## A. Executive Summary:

The 2010 Population Census for the Line Islands was planned to be conducted by the Deputy Census Commissioner. In order to undertake the work in the Line islands two plans were drawn up: a budget plan, and a work plan - both of these are attached. The plans were meant to guide the work but they could be changed or modified in light of new events or unforeseen circumstances that suddenly arise.
The household listing using the GPS was done first on Tabuaeran island, then Teraina, and finally on Christmas Island. The reason for doing the work on Tabuearan first was to take

[^4]advantage of the ship (Kwai ${ }^{6}$ ) that arrived in the Line islands when the deputy census commissioner was just starting to prepare for the census in the Line islands. The ship was to go to Tabuaeran first, and then Teraina. Grabbing the chance, the deputy commissioner boarded the ship and sailed to the two islands to carry out the household listing. The supervisors and enumerators training was carried out after the household listing.
Enumeration was carried out successfully on all the islands, but at different dates, due to the distance and transport problem. The enumeration on Christmas island took place on the morning of the $7^{\text {th }}$ November 2010, in line with the enumeration on S.Tarawa and most of the islands in the country. Tabuaeran enumeration was done on the $7^{\text {th }}$ December, 2010 (a month later) while the enumeration on Teraina took place on the $13^{\text {th }}$ December 2010 (a week after the census on Tabuearan or five weeks after the national census date). These are the earliest dates for a ship to visit these two islands after the national census date of 7 November 2010.
All the questionnaires have been returned to the NSO in Tarawa for subsequent codings and data entry-and the preliminary results for the three islands are as follows:
Christmas Island - 5,791 Tabuaeran Island - 1,991 Teraina Island - 1,701

## B. Full report <br> Introduction:

This is a report on the 2010 census project that was carried out in the Line Islands. It lists out or explains what the deputy commissioner has done under the prevailing conditions and circumstances in the Line islands during the census preparation and during the actual census enumeration phases. This report also includes justifications for the re-budgeting and replanning exercises. All different aspects of work were explained and documented as well as the SWOT analysis for the whole project. Phases of work are inclusively documented for the purpose of quality assurance and consistency of the work.

[^5]A copy of the work plan is shown below:

*** GPS operators are now trained as supervisors because most information are the same for both jobs

## GPS marking and Household listing

Nine staff were recruited through the test that was carried out on $21^{\text {st }}$ August, 2010 and these staff were trained on GPS on how to mark the household positions as part of the preparation prior to the census enumeration. They traveled to Tabuaeran and Teraina to carry out GPS markings and Household listing on the Kwai (ship) accompanied by the deputy census commissioner (DCC).
Upon their return, they carried out the Household listing and GPS marking for Christmas island. Most staff did the listing from closer villages Ronton to Banana, whereas three staff did the listing and GPS marking for Poland village. The final GPS marking was done with the assistance of the officers from the WildLife department for the Kakai spots. This needs to be done as there are families staying in these places for quite some time-cutting copra to earn cash income. Eventually they might return to their 'permanent' homes but during the census period they all stayed at the Kakai areas in the bush.

## Demarcation (EA exercise)

The demarcation for Tabuaeran and Teraina islands were fairly easy-one village would be treated as one EA—as is done in the Gilberts islands group.
The demarcation on Christmas island however was slightly different because the villages are generally larger with more people and so one village would have several EAs instead of just one

EA—somewhat similar to what was done on S.Tarawa. About 60 households, on average, were assigned to one EA. In Ronton village there were 6 EAs, Tabwakea had 12 EAs and Banana had 4 EAs and Poland was treated as 1 single EA-a total of 23 EAs.
Overall in the Line islands there are a total of 14 institutions, 23 EAs for Christmas Island, 9 EAs for Tabuaeran and 9 EAs for Teraina.
After the demarcation exercise, the recruitment for enumerators was made. Although it was planned to have 22 enumerators for the 22 EAs, only 20 enumerators were finally selected after a test was conducted at the JSS school building. At this stage a total of 29 staff were recruited: nine (9) supervisors, and twenty (20) enumerators. The previous nine GPS operators, after receiving relevant training, became census supervisors.

## Supervisors and enumerators Training:

Two trainings were conducted; one for the nine supervisors on the basis of the Supervisor's Manual and the other training was done based on the Enumerator's Manual. Both these trainings were conducted given the time and the availability of the course materials prior to the enumeration dates, on the materials that were provided by the Census Commissioner. For Christmas Island, the training was done on the first week of November, this is the only available time for training and therefore the best and priority focus was given to the data collection questionnaire.
No training was done for Tabuaeran and Teraina given that no ship was available during the time, best convenient for the training, therefore the trained staff from Christmas Island were trained also to serve the purpose of this situation.

## Enumeration:

## On Christmas Island..........

The enumeration on Christmas Island was conducted from the $8^{\text {th }}$ November to the $19^{\text {th }}$ November a period of two(2) weeks with the reference date as the $7^{\text {th }}$ November.
Staff recruited for the population census includes 9 supervisors and 20 enumerators, and the coverage includes all villages including Poland, Institutions such as the prison, hospitals, maneaba, hotels and motels and Te kakai spots.
The plan for the outer islands enumeration was to be conducted likewise in Tabuaeran and Teraina. This plan will and can only take place if there is a ship available at the right time. This in fact was the problem encountered in the Line islands so in place a new plan was set up to accommodate the circumstance. The second plan "plan B" was to use the supervisors and enumerators on Christmas island to enumerate Tabuaeran and Teraina, when there is a ship going to the islands. The enumerators were instructed to enumerate the people on the islands before the new passengers go on shore or to not count the passengers of the ship, except when they had not been counted.

On Tabuaeran \& Teraina Island. $\qquad$
The enumeration on Tabueran and Teraina was planned in accordance to the travel schedule of the vessel MV Moamoa ${ }^{7}$. Moamoa schedule was to go to Tabueran, then Teraina, then back to Tabueran, before returning to Christmas island. The DCC original plan was to use the supervisors and enumerators from Christmas island to conduct the enumeration on the two islands: fourteen (14) to enumerate Tabuaeran, and fifteen (15) to enumerate Teraina. This plan was to suit the route of the ship schedule at that time unfortunately when the time came the ship schedule changed with no return trip to Tabuaeran, and so the DCC had to alter her plan accordingly. All the plans were discussed with the CPPL worker on the island, and the captain of Moamoa (Captain Edwin) .
The ship's new route is as follows: Christmas - Tabuaeran - Teraina - Christmas. So the new plan was to use all the 29 supervisors and enumerators to carry out the enumeration on Tabuaeran while the ship was on the island, and the ship had to be delayed one more day in order to complete the enumeration on the island.
The census staff held a brief meeting with the island council staff when they first arrived on Tabuaeran-to explain to them the purpose of their arrival and how they would conduct the census. During this meeting, the council staff did not agree to what the census team proposed to do despite the full explanation by the DCC. The DCC explained the difficulty of transport and communication, and how they tend to overcome the problem. This dispute caused a 1 day ( $6^{\text {th }}$ December) delay. The dispute was solved between the clerk to the Island council and the Deputy Census Commissioner the following day ( $7^{\text {th }}$ December), by agreeing that the issue will be forwarded to Tarawa. As a result of the deadlock in that meeting it was not possible to get local guiders (supervisors) from the islands and therefore the census team had to carry out the enumeration (locating and counting houses) using the information from the first visit when the household listing exercise was carried out.
Upon the arrival of the ship at Teraina, a meeting was again held with the council mayor and the island clerk to introduce the census team and to request their cooperation and assistance. At the end of the meeting it was agreed that one from each village was to be recruited to assist the census team as a "local guide" around the island. Their main role was to locate people that were not in their homes during the enumeration, say out in the fields or fishing in the sea, and to point out houses that might need careful approach, like the ones with dangerous dogs or the ones with people that are "very inquisitive" or have very "stubborn" nature. The local guides roles were very important and useful to the census staff.

## Lessons learnt:

Inter-island transportation is the main problem for the census enumeration in the Line islands. Several plans have to be made in order to be flexible and in order to take advantage of the ad

[^6]hoc visits of the ships, including the KWAI vessel from Honolulu. The plans for the census activities should also be flexible, such as when the household listing (GPS markings) exercise had to start from Tabuaeran, instead of Christmas island.
The census planners should recognize and anticipate the delays and the "sudden" changes in the shipping routes and to be able to grasp any opportunity that arises, such as when the DCC boarded the KWAI on its way to Tabuaeran and Teraina to carry out the household listing. The plan to use all 29 census staff from Christmas island to enumerate Tabuaeran and Teraina was also a quick response to the sudden change in Moamoa travel schedule. The late census enumeration on both islands is a direct consequence of no transport until Moamoa trip on the 4 December 2010, almost a month after the census designated date.
The recruitment and training of census staff was also a big challenge given the uncertainty of the sea transport. Given these uncertainties and sudden changes, it was necessary to revise the plans and the budgets several times to suit the current circumstances.

It is also useful for the census team to have some skills in "negotiating" as there may be times when the local authorities would have different views on how things should proceed. This is noted when the census team arrived in Tabuaeran and met with island council officials. Some of the problems noted include:

1) The mayor and the island councilors did not agree with the deputy census commissioner (DCC) and held back the census work.
2) The major argument of the island councilors was on the recruitment conditions. The DCC did not agree because of the limited time of the ship at the island.
3) It was agreed that they would wait for the advice from Tarawa however it became apparent that it would take time for the reply to come from Tarawa so the clerk finally gave his final decision for the census work to go ahead-after one day has lapsed.
4) The consequence of the delay was the extra cost of the ship for one day which amounted to $A \$ 7,000$. The delay also inflated the cost of the census staff.
5) The consequence of the standoff between the island councils and the DCC was that there were NO local guides to help the census staff. This could undermine the quality of the enumeration.

It is important that organizers of future population censuses in the Line islands keep in mind the problems noted here and how they were resolved at the end.

| TOTAL |  | 9017 |  | 9514 |

The tables above shows some differences between the counts made during the initial household listing and the figures recorded in the actual enumeration. In particular Tabuaeran shows a difference of about 60 households between the two counts. The drop in the number of households, as reported to the census staff, was due to :

1) people leaving the island following the "temporary" closure of the Mereang Tabai Secondary School,
2) the closure of the Norwegian Cruise Liner (NCL) Company that frequented the island in the past
3) and the weakness of the Atoll Seaweed Company.

The above are the main causes of the movement of people as explained by the local people to census staff.

## Conclusions:

Hopefully what has been described and documented above will help people understand the basis and the rationale of the revised work plans, and the revised budgets, for the 2010 population census project in the Line islands. The problems and the lessons learnt should also be useful to people planning data collection in those islands in future years. For people wishing to know more about the 2010 census project in the Line islands they should consult Ms Aritita Tekaieti, or the Account section.

## Recommendations:

Population census enumeration in the Line Islands has always been a challenge to census supervisors. The issues and problems may be different from time to time however it is always good to document these and how they were managed to be resolved so that future census
organizers have at their disposal some reference materials or information they can refer to in times of similar crisis.
A few recommendations are listed below:

1) The accounts of the projects (as opposed to the recurrent account), such as the Population Census project, should be separate from the main government accounts, and to be managed by full time staff. This is to avoid frequent delays in payments to census staff. As noted in the 2010 census project there is inconsistency in the figures on the remaining balance of the census project funds between the DCC (project controller) and accounting people (project accountants). Some people who were not paid on time complained to their politicians who then took the issues to Parliament.
2) Inter-island transportation should be improved in order to enhance future population censuses and reduce costs
3) There is limited number of motorbikes on Christmas Island and the roads are so long therefore for future censuses motor vehicles should be rented instead of motorbikes
4) An insurance budget for field staff should be included in the census budget for the Line Islands to cater for accidents that might arise when the census staff travel or carry out their enumeration work both on land and by sea.

### 4.4 On Kanton island (Phoenix group)

The census enumeration on Canton island took place in February 2011--several months after the national census designated date of $7^{\text {th }}$ November 2011. The Deputy Census Commissioner arranged a supervisor from Christmas island who is planning to travel to Tarawa and compensate the fare and payment to contract him to carry out GPS reading and household listing as well as conducted the enumeration on Canton island. The supervisor boarded MV Moamoa from Christmas island and when the ship stopped at Canton island, on its way to Tarawa, he went ashore and did the enumeration. He managed also to plot the house positions using GPS.

The delay in conducting the census on Canton island is due to the lack of transport to the island-sometimes no ship would visit the island for several months, and shortage of food supply is often the main problem on the island. Canton is in the Phoenix group and is inhabited by about 50 people who stayed there to look after the government facilities. Sometimes overseas sailing boats call at the island and exchange their cargoes for local produce.

## 5. Data processing

As mentioned above, SPC designed the data entry program using CSPRO. SPC also trained the data entry operators, and the data entry started around January 2011 and continued for over several months. By Nov 2011 the data entry was completed and the datafile was sent to SPC Noumea for editing purposes. As it turned out, many mistakes were found in the datafile and more editings were made. Some of the mistakes were found when the cross tabulations were made. For instance, cross tabulations show that some of the households on the outer islands are connected to PUB - a company that is located on S.Tarawa. The census commissioner went to SPC, in Noumea, in August 2011 to clean up the datafile, do some initial census tabulations, and start some analysis. The cleaning up of the datafile took considerable time and this is one of the basic reasons for the delay in publishing the 2010 population census results. Some preliminary results (in the form of printed tables and e-copies) however were produced towards the end of 2011 but no formal report has been produced up to this point in time.

## 6. Tabulations and data dissemination

The first preliminary census results were produced in January 2012 however because of the many mistakes found during cross tabulations it was necessary to wait while SPC "cleaned" the datafile. The NSO received the "clean" datafile from SPC around March 2012 but some mistakes were noted again, especially in the labour force information. By the time this report is being finalized SPC is still editing the datafile. In the meantime cross tabulations have been made on the census datafile that is currently with the NSO.

## 7. Concluding remarks and Recommendations

A population census is a major national undertaking that requires substantial amount of money and elaborate preparations. Although the event is a recurring one (i.e. every 5 years), the planning and the execution of the project requires considerable input and effort of all those involved. Each activity or phase is important and if one is not executed according to its timeframe then the accuracy and quality of the final results could be severely compromised. For instance, if the enumerators training are not conducted well, some enumerators will not understand the questions and they may ask wrong questions, or they might interpret or explain the questions wrongly. Or if the computer operators are not trained well on data coding procedure, they might code the census questionnaires wrongly. The many errors found in the census data and the delay in
producing the report would suggest that some parts of the 2010 census activities have not been carried out properly. What is surprising is that this is the first time that an external agency has been involved heavily in the Kiribati census operations-yet the outcome is generally poor. One important factor that may have led also to the poor results is the delay in the approval of funds. The past population censuses were managed and conducted basically by local staff with minimum inputs from external bodies-and the outputs came out on time and the data quality was generally good.

One important lesson of this population census project is that the census commissioner should be someone who has both theory and practical knowledge of conducting population censuses. If such person is difficult to find, then the next person to choose is someone who has long experience in working in the census projects and have shown dedication and commitment in statistical work. Furthermore, one should not always rely on overseas TAs or regional agencies because some of these may have little or no practical experience at all in conducting large scale censuses. A good example of this is in the questionnaire design of this 2010 population census. There are "too many" questions asked, and the second mistake is the smallness of the text or the font used. The enumerators and the respondents, as well as the coders and data entry operators, would surely find it difficult to read and understand the questions, and this could be one of the main reasons for getting many errors in the final census datafile.

While there are problems noted in the management and conduct of the 2010 population census, the census commissioner and her staff have tried their best to see that the census was conducted on the designated date, i.e. exactly five years after the last census. It is important to note also that this is the first census that uses the GPS in marking household positions-this means that digital maps of the census information can be made available now.

Based on the 2010 population census experience, the followings are useful guidelines for future censuses:

- Recruitment will be based on adequate level of education and having some minimum qualification (e.g. good English grade, and a minimum school level of Form 5)
- The budget for the next population census should be included in the NSO Recurrent Budget 2013-at least the amount required for the initial census preparations. Likewise some census budget should also be made in the NSO 2014 budget-to avoid the late start of the census activities.
- The transport logistics including shipping should be considered well-ahead of the census date, especially for the Lines and Phoenix group.
- The TAs services and involvement should be considered carefully-by the NSO and other local stakeholders, before the census operations start
- All questionnaires should be verified by double entry (at least 50\%)-this should be fairly easy with CSPRO.
- Explore the use and advantages of a scanning system—if possible.

## 8. Explanatory Notes on the Tables

The following tables are produced from the 2010 Population Census datafile using CSPRO, and most are basically similar to the 2005 population census tables. The new tables are based on the new questions asked in the 2010 census questionnaire. It is important to keep in mind however that there are more tables or information that can be produced from the census datafile but the user has to specify clearly what he or she requires. One set of tables that have not been shown in the reports is the household asset ownership (or availability) by population. That is, it is possible now to cross tabulate information from the household questionnaire with the information in the "personal" questionnaire. For instance it is possible now to know how many people can access PUB water system or to know how many people use the "beach" for their convenience-before only the number of households is shown.

What's New in the 2010 census:

- In all the Island tables in this report Betio is treated as like one of the Islands from the rest of South Tarawa.
- Some format of the table includes rural and urban areas by age group.
- Literacy is also a new question included as well as English language ability.
- Labour questions have included more information with regard to formal work, market oriented, subsistence, unpaid/volunteer workers and unemployed.
- Other new information concern health which includes the activity in playing sports for individuals.
- With new communication means Internet usage by individuals moved from a household questionnaire in 2005 to a personal question in 2010.
- Internal migration information has been changed from 5 years ago to 1 year ago

## PERSONAL TABLES

## General Tables:

There are tables containing information on general information about people. It summarizes the information on the number of people, households, population density, household average size some more.

## Education Tables:

As in previous censuses report tables about attending school, left school and their attainment and also introducing a few new tables.

## Health Tables:

Questions for health issues concerning smoking, alcohol and kava consumption continue the series of 2005.

## Labour Force Tables:

The section of Labour Force tables involve people 15 years and over. It adopts the definitions of ILO concept of unemployment and other categories in labour force.

## Migration Tables:

Tables for internal migration have changed to record the movement of people about one year ago instead of five years ago.

## Demography Tables:

Fertility questions concerns women only at 15 years and over, children they bore, status of final birth, and a few others concerning their fertility. The tables also include the survival of parents for mortality questions.

## HOUSEHOLD TABLES

## Housing and Lands:

The living quarters is new in the questionnaire and the content includes the type of living quarters for each household, the status of the building in terms of rooms, walls, floor and roofing. The age of the building, the ownership and the way the house is materialized.
The question for lands indicated the ownership rights over the land.

## Agriculture:

The question on agriculture states the household access to food crops, whether nearby or elsewhere.

## Livestock:

Pigs and chicken in status such as local, crossbred or exhorted are being asked as livestock of households.
There is also a question about the pet dogs that have included in this census. Users of this have information about the number of pet dogs in the households.

## Fishing:

About fishing gear and equipment are basically asked in households to indicate the method of fishing that each household use.

## Capital Goods:

Capital goods are being asked because it indicates the capacity of a household in owning assets such as these goods. Benchmark questions on communication goods are asked to show the capacity of household means of owning assets such as these as well as showing their means of communication in each household.

# HOUSEHOLD TABLES 

 2010Notes to the tables:

1) Some tables use the term "Availability" rather "Ownership" because the asset or property in question may not belong to the household interviewed-it may belong to other people, but for the time being, at least during the census period, it is "available" for the use of the household members—hence the use of "Availability" rather than "Ownership".

## I. INTRODUCTION TO THE 2010 KIRIBATI CENSUS

The 2010 Kiribati Census is the thirteenth in a series of the population census been conducted in the Kiribati islands since the very first documented population count in the year 1921. The Kiribati National Statistics Office (KNSO) is responsible to carry out the national census as mandated in the Census Act (Cap 8). The Kiribati National Censuses has been carried out within an interval of five years since 1985. The last census was carried out in November 2005 and hopefully with the availability of funds and resources the next census will be conducted in 2015.
Funding for the 2010 Kiribati Census came from the Kiribati Government, AUSAID and the UNFPA. Other forms of funding support through the provision of technical assistance throughout the census period are provided from other regional organizations such as SPC.
This manual has been prepared to provide the information needed by enumerators to carry out their duties. Candidates for the positions of census enumerators should study this manual carefully during their training and should also use this manual during the field work as a reference and guidance. Individuals selected to serve as enumerators should continue to refer to these manuals throughout the fieldwork period.
You have been appointed as a census enumerator. Your job as an enumerator is to enumerate everyone who was in your area on census Night. You have to ask the questions and to record the answers that are provided by the house members. It is the most important single job in the census. You must make every effort to obtain the complete and accurate answers and to record them correctly.
You will be trained for this job in order for you to carry out your job efficiently and effectively. To become a good enumerator/interviewer, you should attend the training of interviewers which lasted two weeks.

## A. Census Objectives

A census can be defined as a process of collecting, compiling, evaluating and publishing all demographic, economic and social data pertaining, at a given period of time, of all persons living in a country. This whole process involves interviewing or enumerating the entire population in a given location/country in a specified period of time which is known as the census night. The 2010 Kiribati Census will involve interviewing every persons in the whole Kiribati but exclude all Kiribati people living or staying outside Kiribati at the time of the census. This is known as a 'de facto census'.
The main objective of the census is to provide the most reliable and detailed data on the size, composition and distribution of the population of a country at one point in time. Additionally, population and housing census not only provide the accurate count of the population but also provide reliable and more detailed information of a population and housing status, such as how many people who are married or living in a poor house condition. In order to plan for, and implement, economic and social development, administrative activity or scientific research, it is necessary to have accurate and reliable data on the size, distribution and composition of population. Other uses and purpose of the population and housing census are briefly outlined below:

1. is to provide the facts essential to governmental policymaking, planning and administration. Information on the size, distribution and characteristics of a country's population is essential for describing and assessing its economic, social and demographic circumstances and for developing sound policies and programmes aimed at fostering the welfare of the country and it people.
2. Providing baseline data for policy development and planning in monitoring and evaluating overall development progress across sectoral applications in the country.
3. Census have helped in providing and updating indicators required for internationally development agendas such as MDGs (Millenium Development Goals), CRC, etc.
4. Population censuses serve many needs by providing statistical information on demographic, human settlements, social and economic issues for local, national, regional and international purposes. For example, population censuses provide basic information for the preparation of population estimates and detailed demographic and socio-economic analysis of the population. The census also provides data for the calculation of social indicators, particularly those that may be observed infrequently because they measure phenomena that change slowly over time, and those that are needed for small areas or small population groups (UN 2008).
5. Census data will also provide a baseline in the demarcation of national constitutions/localities and allocations of representation to the governing bodies.

## B. Census Organization

The Kiribati National Statistics Office (KNSO) takes fully responsibility for all 2010 Kiribati Census operational matters including planning and conducting fieldwork, processing of collected data and organizing the writing and distribution of reports. The KNSO will furnish the necessary central office space for census personnel and will undertake to secure transport for the data collection activities.
The Minister of Finance and Economic Development approved and appointed the Census Commissioner who is responsible for the overall organization of the census and overseeing the day-to-day census activities. The Deputy Census Commissioner will be appointed to assist the Census Commissioner in census related administration matters and also to assist in conducting the census activities in the Line and Phoenix groups. The Census Commissioner will also appoint the census data processor who will be managing all the census data entry and tabulations.
The census supervisors are answerable to the Census Commissioner and to the Government of Kiribati for the efficient conduct and supervision of the census in their respective areas. The supervisor will maintain the good supervision of the enumerator's work throughout the census enumeration period. At the same time, enumerators are to report everything on the field to the supervisor to first act on it. If the supervisor could not take appropriate actions then this should be reported directly to the Census Commissioner in the main office for appropriate action.

## C. Census Regulations

The undertaking of a census in Kiribati is empowered by the Census Ordinance (Cap 8) and mandates the Kiribati National Statistics Office to carry out this exercise. No other institutions in Kiribati have got this same mandate to carry out this exercise.
The information collected in this census must remain confidential. There are penalties specified in the Census Act, (Cap 8), for persons who reveal to others about information learnt in the course of their census duties
The only persons permitted to see or hear information taken from persons being enumerated are your census team particularly the Supervisor and officers in the Census organization to whom the enumerator reports to. The Kiribati census team members are not to give anyone including friends, relatives or other enumerators, the information collected from all enumeration areas. Make sure that forms which have been filled in from previous households are not to be seen by members of other
households in another enumeration area. You must not reveal information even to members of your own family. These rules are necessary if the public is to have trust in the census organization and so they can be sure that information given to census enumerators is used for census and statistical work only. As such you are required to sign the Secrecy Act of the Kiribati Statistics Act in which you are abide by its conditions. This means you will be prosecuted and penalized if found to have broken the conditions in the act. It is also an offence to wilfully falsify any information in the data collected. All of these are subjected to prosecution.
The Kiribati National Statistics Office is forbidden by law to give information about any person to any other person or to any other Government Department or agency. You should inform members of the public of this fact if they raise the matter of confidentiality. The public in Kiribati has a fine record of willing cooperation with census-takers, and this is based on past experience with trustworthy enumerators. The census authorities are extremely anxious that this situation continues.

## Refusal to Cooperate

Just as you must keep all information confidential, the nominated Head of the Household and all other persons in a Household are obliged by law (Statistics Act) to give answers to the information questions contained in the census schedule. Persons who refuse to cooperate with you by not answering the questions truthfully and completely to the best of their knowledge and ability should be reported by name. Do not get into arguments or difficult situations with respondents. It is not your job to enforce the law. Inform respondents of their obligations under the law, if necessary, and if cooperation is not forthcoming, give their names promptly to your Supervisor. You can be sure that these situations in Kiribati are extremely rare and that you are unlikely to have any trouble of this sort.
In cases of refusal, the enumerator should at first try to explain the purpose and important of the census and why he/she is required by law to be interviewed and to provide answers as required. The enumerator should try at least 3 times to convert the refusal and if still refused then the supervisor should be informed about this case.
For the course of the census, the following census regulations have been established and will be strictly enforced in order to have a smooth and success census. The census director and census commissioner may terminate the service of any census fieldworker if not complied with the following regulations:

1. All census fieldworkers (supervisors, enumerators, data operators) are obliged to attend the specified training except for illness that required approval from the census director, census commissioner, supervisors and lecturers to be absent from the training.
2. In the training, participation and cooperation is required. Any misbehaviour can led to any dismissal from training and from the census. This is also applied to any misbehaviour on the field.
3. During the course of the census training and fieldwork, you are representing the Kiribati National Statistics Office of the Government of Kiribati. Therefore your conduct and behaviour must be professional in dealing with the public. Any aggressive and disrespect conduct to the people and public in the field may led to dismissal from the census team.
4. All census fieldworkers are obliged to carry out their duties according to the census regulations, budget and time.
5. Census fieldworkers must work closely together, sharing in the difficulties and cooperating and supporting each other.
6. It is most critical that the data gathered during the fieldwork to be accurate and valid. To control
for inaccurate or invalid data, supervisors are expected to conduct spot checks during the enumeration.
7. All expenses for the census operations have to within the budget and to be approved by the right personnel.
8. Census data are confidential and therefore should not be discussed with anyone. Persons breaking this rules will be dismissed from the census.
9. 

## D. Definitions

The following are the most common terms referred to in this documents and any census process. The people of Kiribati will be enumerated using questionnaires in double sided A3 size paper containing both Household and Person questions in this Census. Each Household will have its own form containing personal and household questions. For this purpose you will have to determine the Household in which each person lives and therefore record them in the correct questionnaire form.

## Person

This is any individual member of the household or institution who is present on the census night and is therefore counted in the census. This includes every young and old, male or female, expatriates or residents, tourist and locals alike. For census purposes, the term "person" denotes each individual falling within the scope of census. A person can be identified as belonging to the household population or to the institutional population

## Household

For the purpose of this census, a household is defined as "Those persons who usually eat together and share the work of preparing the food and/or the cost of work of providing it". Normally household members also live and sleep in the same building but experience has shown this is not always so, which is why the definition is based on eating together rather than on living or sleeping in the same building. Not also that a household can also be an individual person without combining with other persons. A household may be found in a variety of forms. It may spread over more than one building. Members of a family may sleep in two or even more buildings but share one place to cook and eat. They should be enumerated as one household. The group of people in a household may consist of persons who normally live in that household but may also include visitors or guests who happen to be spending the census night there
Two or more households can be found in one building. Two or more families who share the same building but who do not normally prepare food and eat together should be enumerated as two households, e.g. blocks of flats or workers who have their own quarters (and who do not eat with the family). Households may be found in buildings intended primarily for other purposes. A family may live in the back of their shop for instance. Boats tied up to a dock or even pulled up on shore may be permanently lived in and should be counted as households. Enumerators should look out for such dwellings and enumerate their occupants as a household if they meet the definition.

## Institution

An Institution, for census purposes, may be defined as an organization providing specified services or performing some general public function for a group of residents or inmates who will normally be unrelated to each other. Institutions or sometimes refer to as collective households or non private dwellings such as hospitals, schools, prison houses, hotels, etc.
Ships staying on Kiribati waters on the census date should be enumerated and they are classified as institutions and not households. As noted above, Yachts who are present during the census night will be enumerated as households
Note that the same form will be used to enumerate people staying in institutions.

## The Census Date ( $7^{\text {th }}$ November, 2010)

The major objective of the census is to determine the number and characteristics of people in Kiribati at one particular point in time, i.e. on the $7^{\text {th }}$ of November, 2010. To be more exact, the reference point in time of the census is the midnight point when the $7^{\text {th }}$ November day begins-i.e. a single point in time when the time switches from $6^{\text {th }}$ Nov to the7th November. However in practice the reference period is taken to mean the whole of the census night—this is normally referred to as the Census Night. All persons alive in Kiribati on Census night are to be included - meaning that all people sleeping in one particular household in Kiribati on the night when the $6^{\text {th }}$ changes to $7^{\text {th }}$ at midnight should be counted as members of that household. Children born before midnight $07^{\text {th }}$ November are to be included. Babies who are born after midnight Sunday $07^{\text {th }}$ November should be excluded. Persons who die before midnight on that Census night are to be excluded.
It is impossible for an Enumerator to visit all households in an EA/village on Census Night, and certainly not just before midnight, so that the Enumeration must be spread over a longer period, both before and after the actual Census Night. However the aim should be to record the population as if, suddenly, at one minute to midnight, everything came to a complete stop and the population stood still ready to be counted. In reality you should not be disturbing people this late at night. Keep your visits to households to within reasonable hours-usually at day times but your question should always relate to the census night.

## Present or Absent

In the actual Census since "all persons alive in Kiribati on Census Night" are to be enumerated, it follows that they are physically present in a Household or a collective dwelling/Institution on Census Night. Each person actually in a Household at the time of Census enumeration (whether a resident or a visitor) should have a column filled out in the appropriate Household Questionnaire.
Kiribati is conducting a "de facto" census. This means that persons are to be enumerated in the household where they spent the night. There are likely to be problems enumerating persons moving between households during the census period. Since the enumeration has to take place over several days some persons could be enumerated in both places or possibly to miss being enumerated at all. You will have to take extra care with households which have visitors or those in which some of the usual members are away.

Persons staying the night away from their household but not in another household, for instance, somewhere in the open air (fishing or hunting) on night duty, (policemen, nurses, engineers at the power station) should be enumerated as if present in their usual households.
Persons staying overnight in another household, for instance, a woman visiting her sister on another island, a business man staying in a hotel, should not be considered as present in their own household. They are to be enumerated where they actually spend the night.
It is essential that all possible precautions be taken to ensure that every person is counted and every person is counted only once.

## Who To Interview

Whenever possible, the head of household should be interviewed. If the head is not available then another responsible adult may be interviewed. The head or other responsible adult is able to answer personal questions for themselves or other household members. Children under the age of 15 years should not be personally interviewed.
It is possible that the person being interviewed may not know the answers to all questions for other household members. If this is the case then you will need to make arrangements to obtain the necessary information from the person concerned.
Questions F1-F5 about women's childbirth can be particularly sensitive and should, whenever possible, be asked directly of the women.
The questions about smoking and alcohol and kava/yagona consumption are also questions that are best directed to the individual person.
The enumerator will have to display skill, tact and judgement when asking questions. The objective is to obtain complete and accurate answers to all census questions without upsetting or offending any household members.

## E. Training

Training is critical for all census field workers so that they are sufficiently prepared for their jobs during the census. The training for the 2010 Kiribati census field staff has 2 parts: 1 . Supervisor's training or Training of Trainers and 2. Enumerator's training.

## Enumerator's training:

The training of enumerators lasts for 1.5 weeks ( 8 days). The training will consist of a combination of classroom training and practical exercises in doing the interview. It is essential that before each training session, you should study this manual carefully along with the questionnaires in order to be prepared with questions and issues you might have during the training. You are also encouraged to ask as many questions as you might have to avoid any mistakes during the actual enumeration.

In the training, you should receive the following training materials:

1. Enumerator's manual
2. Pen
3. Pad
4. Questionnaire

The training will consist of power points presentation on each of different sections of the questionnaire. Instructions on how to fill up the questionnaires will be discussed in detail with explanation on the
purpose and importance of each questions. You will also take part in some practical interviewing undertaken in the classroom or in the field.
You are expected to attend the whole training and your participation is important for determining your capability to become a census enumerator. Therefore your attendance in the training will be recorded and any cases of missing the training will be reported to the census commissioner.

## F. Enumerator's Role and Responsibilities

The enumerator has a very important role and responsibility in the census because he/she collects information from the respondents. Therefore the success of the census depends on the quality of each enumerator's work. In general, the responsibilities of the enumerator include the following:

- To identify all households in his/her EA/Village to be interviewed.
- To ensure that no households missed out during the interview.
- Interview and collect all information from all household members staying in the household on census night.
- To be able to do extra duties directed by the supervisor.
- To work extra hours if required in urgent cases.
- To work within the census regulations.
- To cooperate with all census team members and community.
- To report any issues to his/her supervisor.
- To complete the work within time and cost.
- To return all questionnaires along with all censuses related documents to the supervisor.

## 2. CONDUCTING AN INTERVIEW

A. How to approach the public

You will be assigned to interview each of the households in one or more EAs/Villages. At the beginning of the interview, both you and your respondents are strangers to each other. The respondent's first impression of you will influence their willingness to cooperate. It is important that your dressing and appearance is acceptable in that community you are working in and that your manner is friendly as you introduce yourself. It is always to open the interview with the smile and a word of greeting. This will simply put your respondents at ease.
Start the interview after introducing yourself and explaining the purpose of your visit. Explain briefly what the census is all about and be ready to answer any questions about the census that the people may ask. In cases where you cannot answer any queries, do not panic but carefully inform the respondents that you do not know the answer and will deal with the query soon after contacting your supervisor. While your respondents might have more queries and questions, take pre cautions of your time in dealing with such cases. At this time, it is important for you to emphasis the census regulations in dealing with data confidentiality. Explain to the respondents that data collected are dealt with confidentiality.

## B. Some tips in conducting the interview

Each enumerator can develop and apply different techniques in carrying out the interview. However, here are the followings basic principles and guidelines that will assist you in becoming a successful interviewer.

1. Be neutral during the interview: When interviewing, it is important that you remain neutral throughout the interview. Do not show any expression on your face or by the tone of your voice that the respondent has given a right or wrong answer. Never appear to approve or disapprove of any answers provided by your respondents.
2. Do not hurry the interview: During the interview it is important that the respondents understand what is being asked. So take your time and ask the question slowly and clearly to the respondents. To rush the interview will lead the respondents to provide inaccurate answers.
3. Never suggest answers: You will come to cases where the respondent's answer is not relevant to a question. This could be the case when the respondent is confused or does not understand the question clearly. Explain again the question and try to avoid providing the answer to the respondent.
4. Do not change the wording or sequence of questions: The questions in the census had been well developed in the way that they produced required indicators. In order to get the right indicators, it is important that the wording and the sequence of the questions are maintained as they are on the questionnaire. In cases where the respondents has not understood the question clearly, you should repeat the question slowly and being careful not to alter the meaning of the original question.

## 3. FIELDWORK PROCEDURES

The Kiribati 2010 Census fieldwork will proceed according to the budget and timetable. The success of the census fieldwork depends on the census team's understanding and following correct field procedures and operations. This section will help to describe some of the fieldwork operations that the enumerator should follow in order to complete his/her task at the required time. This section will also assist in defining what tasks are involved in the census fieldwork as an enumerator.

## A. Fieldwork Preparatory

At the end of the enumerator's training, you will be expected to start the census enumeration in your assigned area. The supervisor is responsible for assigning your area of work along with your workload to be completed in a two weeks period and you will be assigned a workload that can be reasonably completed in this timeframe. As an enumerator, it is in your responsibility to carry out the enumeration assigned to you and to cover and complete what is expected from you. Liaise with your supervisor about your workload and your responsibilities. It is important to understand your EAs boundaries that you are assigned and to be able to accomplish the work within the time required. If in any doubt, it is always advisable to discuss everything with your supervisor before you commence your duty.

## 1. Fieldwork documents:

Before going into the field, make sure that you have the following materials with you:

- Questionnaires (in a booklet)
- Enumerator's manual
- Household listing form of your EAs/Villages
- Maps of your EA/village
- Enumerator's control form
- Blue Pens
- Bags
- caps
- IDs or official letter of identification
- Umbrella

The above field materials should be provided to you by your supervisors. It is your responsibility to ensure that you get everything prior going to the field.

## 2. Household Listing Forms:

The updated household listing form will be prepared by the KNSO and provided to you prior going to the field. Your household listing form shows the list of households in your EAs/Village that were living there during the listing exercise several months ago. An example of the household listing form is shown in Appendix 1. As shown the household listing form contains the household number, GPS Sticker number, name of household head and total household members by sex.

To avoid confusion and missing households during the enumeration, the enumerator is advised to follow the sequence of the household listing forms when doing the enumeration. During this visit, the enumerator should update the information about each household on the listing form and record the final result of each visit made to all households as shown on the form. The enumerator should check that the household has the same GPS Sticker number as shown on the listing form. Check also that the household head is the same. If not then confirm with your supervisor that you are enumerating the right household but there may be some errors with the numbers. In cases where new households exist, the enumerator should insert new households at the end of the list. In other cases, the codes provided in the household listing form should be applied.

## 3. Enumerator's Control Forms:

The main purpose of the Enumerator's Control Form is to monitor and manage the enumerator's work in the field. The supervisor will also use the enumerator's form to monitor the enumerator's progress throughout the field work. The enumerator's control form will assist in controlling the right number of households to be enumerated in one particular EA/Village and also indicate the number of visits made during the enumeration. It is the responsibility of the enumerator to update this form accordingly. The enumerator should record all his/her visits to every households on the enumerator's control form. An example of the enumerator's control form is shown in Appendix 2.
Prior going to the field, the enumerator should be provided with all the field materials including enough enumerator's control form. To fill up the enumerator's control form, the enumerator should record the right geographical identification of EAs/villages that were assigned to him/her. The codes to be used for island, village and EAs are shown in Appendix 3. During the enumeration and at the end of each visit to each individual household, the enumerator should fill the enumerator's control form following these steps:

- Record the household number in column one
- Enter the GPS sticker number in the second column
- Write the name of Household head that you just finished interviewing in column 3
- In the following three columns make sure to enter the right number of household members
- In columns 7,8 and 9, check for the number of visit that you made for this households
- In the last column, enter the codes provided at the bottom of the form to describe the result of
your visit to that household. For example, household 002 headed by Tom Redfern had 5 household member and after making 2 visits you finally completed the interview for all members of this household. Enter code 1 at the last column.

After completing each individual household, please update your enumerator's control form. The supervisor will use the enumerator's control form to see and check how the enumerator is progressing. Once all households in your EAs/Village are covered and been recorded in the enumerator's control form, the enumerator should make sure to pass all the questionnaires to the supervisor. After confirming with the supervisor that everything is in order, that all households has been accounted with their questionnaire, the enumerator should record the date when he/she returns all household questionnaire to his/her supervisor. Both the enumerator and supervisor should sign in the enumerator's control form to confirm and agreed that the enumerator's work is satisfactory.

## 4. Enumeration Areas and Village (EAs):

You will be allocated an area of responsibility for visiting every household in it and for recording particulars required of every person and household.You will also be supplied a map of your EA or Village (refer to Appendix 4) to assist you in identifying the houses in your area. There will be boundaries marked for EAs on South Tarawa and on the outer islands. Walk around and through your EA with the map to make sure that you know where the boundaries are and where each household within your EA is located.
It is essential that both the supervisor and the enumerator know where the boundaries of all EAs assigned to them are on the ground, and where these boundaries meet any other neighbouring EAs. All areas must be completely covered so that no Households are left out and so no Household appears in two EAs and is counted twice. Get together with your Supervisor and the Enumerators doing EAs adjacent to yours and ensure that each knows the common boundaries. Be especially careful that Households in thinly populated or inaccessible areas are actually included in your count. Each Household will also have its own number and this should be written on the questionnaire. Make sure that the household numbers are consistent with the listing forms.

## B. During the enumeration

At this stage, you should be familiar and know where your EA/Village boundaries and locations of your households in this area. You should interview all households located in your EAs/Village. The supervisor will assign you with the estimated 60 to 70 households, however there will be other areas which will have more than 60 households in which you will interview. As explained above, use the maps and the household listing forms to guide you through your area to your households.
As an enumerator, you are expected to conduct the interview for each individual households in your area. The census enumeration period last for two week starting from Monday $8^{\text {th }}$ and ends on Friday $19^{\text {th }}$. Start on census day (i.e. Monday morning) and aim to finish on Tuesday evening. If this is not possible, finish on Wednesday morning. Remember people staying in maneaba will be counted according to the normal household that they live in. For example, a group of people in the corner might be from one house therefore regarded as one household. Remember that the longer you prolong your enumeration, the more likely is the count to go wrong as people may have moved within the last few days.

## 1. Problems in contacting a household:

In some cases you will have problems locating the households that were listed in your EA/Village because the people may have moved or the listing teams may have made an error. Here are examples of some problems you may find and how to solve them:
a) The household has moved away and a new one is now living in the same place. In this case, interview the new household. Record the household in the listing form and assign a number to that household according to the number on your list. Make a note alongside the household.
b) The name of the household head do not match with what you find in the field. If you have located the correct household, you should consider the household that is living in the dwelling as the correct household.

Example: The list show that household headed by Tion Bio that is listed as living in this EA008 with the household number 004. But when you go to EA008 with the household number 004, the household living there is headed by Tom Bio. After checking that you have not made a mistake about this household, you would interview the household headed by Tom Bio.
c) The household does not live in the EA/Village that was listed. If there is a discrepancy between the EA/Village number and the name of the household head, interview whoever is living in the EA/Village and make a note on your listing form. You should also inform your supervisor about this case.
d) The listing shows only one household in the dwelling, but two or more households are living there now. When the listing shows only one household and you find two households, interview both households and make sure to include the new household in the listing form and assign a number to it.
e) The head of the household has changed. In some cases, the person listed as the household head may have moved away or died since the listing. Interview the household that is living there. Do not change the household number but only change the head of the household.
f) The house is all closed up and the neighbors say the people are away in another place for another temporary function (or away visiting, etc.) and will be back in several days or weeks. The house should be revisited at least two more times to make sure that the household members have not returned.
g) The house is all closed up and the neighbors say that no one lives there; the household has moved away permanently. If this household is listed in the listing form, you should give it code 3.
h) A household is supposed to live in a EA/Village that when visited is found to be a shop and no one lives there. Please correct this by deleting it from the listing form and put a note alongside this household.
i) A household is not found in the EA/Village, and residents tell you it was destroyed in a recent fire. Enter code 5 along this household.
j) No one is home and neighbors tell you the family has gone to the market. Please visit this household three times to visit to the household at a time when the family will be back.

Discuss with your supervisor any problems you have in locating the households that you are assigned to interview in your EA/Village. Remember that the usefulness of the Census data quality depends on the interviewers locating and visiting all the households they are assigned in their EA/village.

## GENERAL PROCEDURES FOR COMPLETING THE QUESTIONNAIRE

To collect the information needed in the census, you must understand how to ask each question, what information the question is attempting to collect, and how to handle problems that might arise during the interview. You must also know how to correctly record the answers the respondent gives and how to follow special instructions in the questionnaire. This part of the training manual is designed to familiarize you with the Census questionnaire.

## A. Asking questions

It is very important that you ask each question exactly as it is written in the questionnaire. When you are asking a question, speak slowly and clearly so that the respondent will have no difficulty hearing or understanding the question. At times you may need to repeat the question to be sure the respondent understands it. In those cases, do not change the wording of the question but repeat it exactly as it is written.
If, after you have repeated a question, the respondent still does not understand it, you may have to restate the question. Be very careful when you change the wording, however, that you do not alter the meaning of the original question.
In some cases, you may have to ask additional questions to obtain a complete answer from a respondent (we call this 'probing'). If you do this, you must be careful that your probes are "neutral" and that they do not suggest an answer to the respondent. Probing requires both tact and skill, and it will be one of the most challenging aspects of your work as a Census enumerator.

## B. Recording responses

In the Census, all interviewers will use pens with blue ink to complete all questionnaires. Supervisors will do all their work using pens with red ink. Never use a pencil to complete the census questionnaire.
There are three types of questions used in the Census questionnaire: 1) questions that have precoded responses; 2) questions that do not have precoded responses, i.e., that are 'open-ended"; and 3) Skips.

## 1. Questions with precoded responses

For some questions, we can predict the types of answers a respondent will give. The responses to these questions are listed in the questionnaire. To record a respondent's answer, you merely check the correct box number (code) that corresponds to the answer as illustrated below.

| P3. What is sname> sex? | $1 \square$ Male $2 \square$ Female |
| :--- | :--- |

In some cases, precoded responses will include an 'Other' category. The 'other' code should be filled in when the respondent's answer is different from any of the precoded responses listed for the question. Before using the other code, you should make sure the answer does not fit in any of the specified categories. When the answer falls in this "OTHER" for a particular question you must always write the respondent's answer in the space provided.

```
P10. What is <name> religion?
    1. Catholic, 2. KPC, 3. SDA, 4. COG, 5. Mormon, 6. AOG, 7.Bahai, 8. Te Koaua
    9. Muslim 10. None, 11. Not Stated, 12. Other (Specify
```

## 2. Recording responses that are not precoded

The answers to some questions are not precoded but require that you fill in and write the respondent's answer in the space provided.

Recording numbers or dates in boxes. In some questions, you will record a number or date in the boxes provided. There are two ways this is done:

- Boxes preceded by codes. Whenever the boxes are preceded by codes, you will fill in the boxes in one row only. You must first check box 1 and then enter the person's number in the two boxes provided. Do not leave the preceded boxes blank.

- Boxes without preceding codes. Whenever boxes are present without codes in front of them, you must enter information in all of the boxes. Every boxes should be filled in.
F5. What is the date of birth of this woman's last child born alive? (Including a child that may have died later)

If baby less than 1 year old, code age as '000

When a response has fewer digits than the number of boxes provided, you should fill in leading zeroes. For example, a response of ' 9 ' is recorded ' 09 ' in two boxes, or if three boxes had been provided, you would record '009'.
Recording the answer exactly as given. There are questions where you must write down the response in the respondent's own words. Try to record those answers exactly as they are given; if you need to shorten a lengthy description, be careful to keep the meaning accurate, and if necessary, write a note on the bottom or side of the page to explain.

```
P28. What is <name> main occupation?
```

3. Skip instructions

It is very important not to ask a respondent any questions that are not relevant to their situation. For example, a woman who is never been to school should not be asked any questions related to education. In cases where a particular response makes subsequent questions irrelevant, an instruction is written in the questionnaire directing you to skip to the next appropriate question. It is important that you carefully follow skip instructions.

1. At school, 2. Left School (GO TO P17), 3. Never been to school (GO TO P17)

## 5. THE CENSUS QUESTIONNAIRE

## A. General Rules

## 1 The Census form (Interview schedule) - How to fill the form

The Kiribati Population and Housing Census Questionnaire is printed on A3 double-sided paper. The questionnaires will be stacked in a booklet containing an average of 60 to 70 households in one booklet.

The questionnaire is laid out as follows:

1-6 family members

1.1 The questionnaire layout

The questionnaire as shown is divided into different sections. The supervisor and enumerators should study the questionnaire in order to follow the sequence and flow of the questions. The questionnaire comprises five different parts and each part collect different information and therefore take precaution that you do not miss any questions out:

- Household identification information, on the top front of the form
- Questions for all household members (P1 to P17)
- Questions for all household members Female aged 12 years and over (F1 to F5)
- Questions for all household members aged 15 years and over (P18 to P32)
- Questions about the households and services (H1 to H17)
1.2 How to fill in the questionnaire:

Only use a Blue Pen provided. Do not use other pencils or pens.

It is important to be sure or to fully understand the response before writing down on the form. Please take your time and do not rush. Position your clipboard properly so that you can write properly.

Start the questionnaire by filling all persons name in the household who are present on the census night before answering the other questions. In this way you can get an idea of how many persons to be interviewed and then referring to their names when asking the questions.
Interview adults only. Do not interview children under age of 15 . If no adults are present during the visit, arrange to come back to the household later when the adults are around.
For text boxes:
Write in CAPITAL letters - leaving clear spaces between the letters
The following are examples of how texts and numbers should be written in capital letters:
For texts: A B CDEFGHIJKLMNOPQRSTUVWXYZ
For texts: I 234567890
For check boxes:
Only mark boxes with an " $X$ ", drawing the lines diagonally across the box from corner to corner. If you make a mistake, completely fill the box and place an " $X$ " in the correct box.

## Geographic identifiers:

Use the codes and name found at the end of this document (appendix 3) to fill in the above
Island: This is the Island code, 2 digits. Please provide the correct island code in the space provided.
Refer to the codes at the bottom for confirmation.
Village: Write down the village name. A village is usually defined as a group of dwellings who usually do things together and have a common and meeting place such as maneaba where the people usually meet and do other things in a communal manner. It may not have distinct or physical boundaries. Just a caution that there may be places within the village that do have names but do not meet the above criteria. There are however places with names within the village. Enter the corresponding codes for the village.
EA: This is the Enumeration Area number that you have been assigned. The Enumeration Area is the lowest census geographical boundaries that usually contained an average of 60 to 70 households. Each enumerator will be assigned one EA each with the estimated number of households between 60 to 65 households. EAs has a four digit numbers used.
HH Number: This is the household number that is shown in the household listing form for your EA or village. However, please take care of changes during your work particularly in cases of new households staying in that place or households which have left. In this case, the hh numbers should be corrected accordingly. Write the correct HH number in the box provided.

## Sticker:

## GPS Code / Sticker Number

|  |  |
| :--- | :--- | :--- |

Check the sticker number on the door or any place of the household and copy it down to these boxes. If no sticker found on the household, inform your supervisor about it. Record the sticker number on the form in the 6 boxes provided.
Type of household and response:

The enumerator should mark one box referring to the private household or the institution. If an institution, then write down the name of the institution in the box provided. Enter the response type codes for the households after the completion of the questionnaire. The codes are listed below. For example, if the household is completed then enter code 1 in the box provided.

1. Completed
2. Refused
3. Unoccupied/Vacant
4. Permanent move out
5. Temporary move out
6. Household destroyed
7. Household split
8. House not found
9. Postponed
10. Other

## Enumerator ID:

## Enumerator ID

Each enumerator will be assigned a unique identification number. Ensure that you know or memorise your ID number.
Note that if there are more than 6 persons in a household, you will need more than one form. The
number of forms will be indicated in the section:
 at the top of the first page and at the top of the second. If there are 2 forms used you will enter 1 of 2 and on the second form 2 of 2 . Change the person number on the second and subsequent pages. The first person on the second page will usually start with number ' 7 ', the second person ' 8 ' and so on.
The reason for entering the names of household members in this prescribed order is that it will give the enumerator a clear picture of the composition of the household right from the start of the interview. The enumerator should specifically enquire about some categories of persons that are often missed out during a census:

Babies: This applies in particular to babies who have not yet been given a name. Make sure that all babies and young children are included. If the infant has no name, write "Baby of person ---" and enter the mother's person number.
Old women: Also make certain that old women are recorded in the census as most times women in the village will be out in the bush looking for firewood or doing other work such as cultivating babai and others.
Nightshift workers: Persons, who normally sleep with the household, but, do not stay with the household or any other household at census night since they are working during that night but will return home during the next morning. This includes police officers, nurses and other health personnel, security guards, prison guards etc. on a nightshift. It also includes fishermen who were out fishing on census night as well as persons staying at other places on census night in order to make an early start the next morning. According to the coverage rules, all these persons should be enumerated with their own household if they returned to their household after finishing their night shift or their fishing trip. Enumerators should not proceed to the next question unless they are completely satisfied that the household listing is complete and correct and that all members of the household are listed.

## B. Person questions

Note that the questions are designed in sequential manner therefore should be asked starting at P1 and proceed accordingly. Look for 'skips' or 'Go to' reference if the responses meet certain criteria. Also note the ages eligible for the questions concerned. This is to ensure flow within the questions and act as a guide to avoid questions that may not be applicable to that respondent. There are questions that apply only for certain groupings such as sex, age, gender and some have certain reference period that will require respondent to recall from memory.
In all cases where the questions are applicable, all questions must be answered and recorded accordingly. Whenever possible, the head of household should be interviewed. Do not interview persons under 15 years of age.
QUESTIONS P1 TO P17 APPLIES TOALL PERSONS

## B. Personal Questions

## P1. What is this person's name?

| P1. What is this person's name? |  |
| :--- | ---: |
| List all who stayed in this household on census night under |  |
| Person 1, Person 2 etc. | First name |

Names are recorded in the census only for the purpose of crossing checking that every and all household members are captured. Kiribati 2010 Census is a de facto census, which count everyone who stayed in the household on census night, even if they are only visiting.
Record the first and last names of all household members living in the household and those who are staying in this household including visitors at the time of the census. Start with the Head of household as person number 1 ( P 1 ) and then followed by other members of the household and make written entries using one column for each person. First name in this case is should be the Christian name or the usual name that the person uses everyday or is known by. Please PRINT names clearly as possible.

Explain to the respondent that names are needed only for identification and monitoring during the enumeration. Explain that the census results will be aggregated together and no individual information is to be release.

## P2. What is <name> relationship to head of household?

```
P2. What is<name> relationship to head of household?
    (for INSTITUTION enter eg. student, prisoner, etc.,)
```

The main purpose of this question is to provide the composition of each household which is very important for demographic analysis. The question is also important to indentify the incident of children abuse if more unrelated families are staying together in one place.
Enumerators should record how the person listed is related to the head of the household. The usual practice is that enumerator's complete question P1, P2 and P3 and so on at the same time. In other words, after the names of all household members were entered, complete P2 and P3 respectively. Relationships between members of extended household members in Kiribati are not always straightforward, particularly for outsiders. For instance the relationship "cousin" "uncle" and "auntie" is much more widely used. As a result, enumerators may not be able to record the relationship correctly. It is important to make this distinction. In case of doubt, it is the task of the enumerator to establish the real relationship. However, in doing this, enumerators should be aware that this may be a sensitive issue for some parents. Remember that relationship here means the relationship to the head of household only. The following relationships are to be used in the questionnaire which cover the most common relationships, so that not many respondents will need to be coded as 'Other'.

- Head of Household ( HOH )
- Spouse (of HoH)
- Daughter/Son(of HoH )
- Adopted Daughter \& Son(of HoH )
- Mother or Father (of HoH )
- Grandmother or Grandfather(of HoH )
- Granddaughter or Grandson (of HoH )
- Mother in law or Father in law (of HoH )
- Son or daughter in law (of HoH )
- Nephew or Niece (of HoH)
- Brother/Sister in law (of HoH )
- Other relatives of $(\mathrm{HoH})$
- None relative of ( HoH )
- Friend or visitor

Note also that the head of household cannot be someone who has died or absent for quite some time. In case of the usual head of household being absent on the census night, the spouse or the most senior person in the household automatic becomes the head of household. You should ask the household members who would be the most appropriate person to be the head of the household.

## P3. What is <name> sex?

| P3. What is <name> sex? | $1 \square$ Male $2 \square$ Female |
| :--- | :--- |

This question is needed to provide information on population structure and differences by sex within the population. Therefore it is important that the enumerators get the right answer.
Most enumerators will, whenever this is possible, enter the sex of respondents from observation. However, it needs to be stressed again that, in most cases, the majority of the household members will not be present during the interview. The head of household, his/her spouse or a senior member of the household who is present, will provide all census information for the absent household members, including their sex. In these cases, the enumerator needs to ask.
Check whether the sex of respondents that has been recorded is compatible with the name ( PI ) and relationship (P2) of these respondents.
In reality, many enumerators do not ask for the sex of absent household members since they assume that this is clear from their name and relationship. This may sometimes lead to errors based on physical appearance alone; it is particularly easy to get the sex of babies and young infants wrong. Whenever in doubt, double check with the father or mother of the child or the respondent who answers the questions for this child.

## P4. What is <name> date of birth and age?

Age and sex are key information about the population. They are used to determine the structure of the population and more importantly for further demographic analysis on the level of fertility and mortality and other important demographic indicators. This question should be asked of all household members including new born babies, old and disabled people.
Record the day, month and year of birth in the boxes provided: DD/MM/YYYY for each person's date of birth and enter the age in the box below. The enumerator should ask a separate question for age even though the date of birth is provided as another way of checking the accuracy of age reporting. The age and date of birth should be consistent. The person's age should be recorded in completed years, that is the age at the last birthday when the respondents has celebrated his or her birthday.
Note: There will be cases in which the respondents do not know his/her date of birth. Use historical events to help the respondents to recall how old he/she was at special times of the events such as Independence or during major natural disaster occured. If the exact day, month or year are unknown, enter 00, 00, 0000. Record the best age the respondents can recall. However most age will be less than 100 years old therefore a 0 (or 00 ) maybe added to the age. For example if the age is 9 , you would write in the age as 009. However those less than 10 years of age, you should record all the dates of births as most would know them. Below are the list of some of historical events in Kiribati which can be used to assist the respondents in estimating their age.

- World War II 1941 to 1945
- Tarawa Battle 1943
- Kiribati First Independence Day - 1979

Note that if you establish the year of birth, also enquire about the age even though you may already calculate it. This is a way of checking the date of birth.
Enumerators should be clear enough that the age required is the complete age, referring to the respondent's age at their last birth date. For example, if Akau's birth date is on the October 15, 1973, then his age should be recorded as 36 at the time of the census (November 7, 2010). Children that are not yet reaching one year old should be recorded as zero (000 age).

## P5. Is <name> biological mother still alive?

| P5. Is <name> biological mother still alive? If "N" or "Don't know" GO TO P7 | $1 \begin{array}{l}\square \\ \mathrm{Y}\end{array}$ | $2 \square \mathrm{~N}$ | $\square$ |
| :--- | :--- | :--- | :--- | :--- |$\square$ Don't know

Ask for the biological mother of the respondent is still alive or not. The biological mother means that is the mother that gave birth to him/her. Do not include adopting or fostering mother. The biological mother does not necessarily have to live within the household. Mark the appropriate box. If the biological mother is still alive proceed to Q. P6. If not then skip to question P7.

## P6. Is she living in this household?

The purpose of this question is to identify those children living with their mothers during the census which allows the use of own-child method for measuring fertility level in the country. If the biological mother is still alive and living within the household, record the biological mother's number in the two boxes provided. ${ }^{8}$

## P7. Is <name> biological father still alive?

P7. Is <name> biological father still alive?
$1 \square \mathrm{Y} \quad 2 \square \mathrm{~N} \quad 3 \square$ Don't know

Similarly, ask if the biological father still alive or not. Do not include adopting or fostering father. The biological father does not necessarily have to live within the household. Mark the correct box for the answer provided.

## P8. What is <name> ethnic origin?

| P8. What is <name> ethnic origin? 1.IKiribati, 2. IKiribati/Tuvalu, 3. IKiribati/Other:, 4.Tuwalu. 5. Australia., 6. NZ, 7. Fiji, 8. Other |  |  | 3 |  | $5 \square$ |
| :---: | :---: | :---: | :---: | :---: | :---: |

The term ethnic pertaining to a group of people recognized as a class on the basis of certain distinctive characteristics such as religion, language, ancestry, culture or national origin. The respondent should be able to identify himself/herself to any ethnic group, however the most frequent answer will be "Ikiribati". Ask the respondent the question and let him/her provides the answer. Do not list out the answers in the questions. Any answers from the respondents should normally acceptable. Mark one box appropriately.

[^7]
## P9. What is sname> marital status?

| P9. What is <name> marital status? 1. Never married, 2. Married, | $1 \square$ | $2 \square$ | $3 \square$ |
| :--- | :--- | :--- | :--- | :--- |
| 3. Widowed, 4. Divorced 5. Separated 6. Other | $\boxed{\square}$ | $\square$ |  |

This question should be asked of all members of the household. Children of course are obviously will be categorised as never married. However, it is important that young girls and boys are asked these questions as they might have been in some kind of marital relationships.
Ask the question as it is and mark the correct box as been reported by the respondents. The following descriptions will guide you to record the respondents answer correctly:
Never Married: applies to the person who reported to be single and never been in some kind of marital relationship.
Married: refers to the person who had been legally and illegally married. Those legally married can be referred to marriages that had been legally married in the Church or Government, or in other kind of marriage arrangement which is considered legal. Any kind of illegal marriage should be categorised as 'married', particularly those who are illegally married and living with their spouses as married. Any couples who considered them as living in a kind of marriage relationship should be all under this category.
Widowed: is for a person who has been married but the spouse has died and that has not remarried again at the time of the census.
Divorced: is for a person who has been married but who has divorced or permanently separated and is living as such at the time of the census.
Separated: is for a person who has been married but who are now separated or has temporary separated at the time of the census. Accept the answer as it is given to you.
It is important to note that it is possible for a person to have been in several stages of marital status in his/her life, please ensure to record his/her marital status at this point in time at the time of the census.

## P10. What is <name> religion?

This question should be asked for all household members. This question is important to help understand an individual behavior and way of living to deal with certain life issues that he/she encounters in life. Information on religion provides further explanations on how people behave in their community, village and country.
Mark the appropriate box that the respondents indicates in response to this question. For answers which are not included in the list, please write the name of the religion or church that the respondents belongs to in the space provided.

## P11. What is <name> place of usual residence?

P11. What is <name> place of usual residence?

1. Same island as at the top of this questionnaire for Household,
2. Another island in country OR another country (specify).

1 | $1 \square$ Same island |
| :--- |
| 2 |

The usual residence refers to the place where one usual stays for more than 6 months. If this person's place of usual residence is the same island as shown on top of the questionnaire, then mark box 1 . If it is different then write the name of the place in the box provided.

## P12. What is <name> home land?

If the home land is the same with what written on top of the questionnaire then tick box 1 . If the home land is different with what is recorded on the questionnaire, write the name of the island if it is in Kiribati. If home land is outside Kiribati then write down the name of the country in box 2.

## P13. What is <name> place of birth?

```
P13. What is <name> place of birth?
1. Same island as at the top of this questionnaire for Household,
2. Elsewhere in country OR other country (specify).
```

Information collected from this question is used to provide information about movement within the country, and about immigration. Place of birth is not necessarily related to citizenship, so it is important to ask a specific question about place of birth.

## Place of birth must be recorded with great care.

In many Pacific countries and particularly in Kiribati mothers are brought from outer islands to give birth in the main hospital on South Tarawa, in cases where the mothers experience some pregnancy complication. This means that children whose normal place of residence is in a rural area or an outer island could have their birthplace recorded as being in an urban area. In this case, the name of the outer island should be recorded as the place of birth and not the hospital or the urban area.
Ask the question carefully and mark the box if the respondent's place of birth is the same with that shown on the top of the questionnaire. Otherwise, write the name of island if elsewhere in Kiribati. If the place of birth is outside Kiribati write neatly the name of that country.

## QUESTIONS P14 TO P17 APPLIES TO ALL PERSONS AGED 3 YEARS AND OVER

## P14. Where was <name> living one year ago (Nov. 2009)?

| P14. Where was <name> living one year ago (Nov. 2009)? |  |
| :--- | :--- |
| 1. Same island as at the top of this questionnaire for Household, | $1 \square$ Same island |
| 2. Elsewhere in country OR other country (specify). | 2 |

Similarly, this question provides information on the population movements within the islands within a one year period. This question would help to indicate which islands within Kiribati are experiencing population outflow and which islands are gaining populations.
Mark the box if the respondent reported living in the same island one year ago. Mark the appropriate box accordingly.

## P15. Is <name> currently attending school?

| P15. Is <name> currently attending school? | $1 \square$ | $2 \square$ | $3 \square$ |
| :--- | :--- | :--- | :--- |
| 1. At school, 2. Left School (GO TO P17), 3. Never been to school (GO TO P17) |  |  |  |

The purpose of this question on school attendance is to provide information about the ages at which people are leaving school and whether all children of school age are attending school. Since education in

Kiribati is provided free for primary level, it is important to determine the level of school attendance within this level and at the other levels as well.

In this sense "school" means any educational establishment which are considered formal education. Formal education are schools which have been approved and recognized by the Kiribati government such as Pre-School, Primary, JSS, Secondary or University in which education is given on a full time basis i.e. everyday. For instance, Children at pre- school, primary, secondary should be shown as 'At school' and also those students who are full time study at USP centre, nursing schools or any other boarding schools are included.

Remember that this question is asked to respondent aged 3 years and over. Ask the question as it is written and mark the appropriate box. For those answers who has left and never been to school skip to question P17.

## P16. What is the level of education sname> is currently attending?

```
P16. What is the level of education <name> is currently attending?
    Preschool/Kindergarden: 01. Yr1, 02. Yr2, 03. Yr3
    Primary school-class
    11. CL1, 12. CL2, 13. CL3, 14. CL4, 15. CL5, 16. CL6
    Junior Secondary school - form Senior Secondary school - form
    21.F1, 22. F2, 23. F3, 24.F4, 25.F5, 26.F6, 27.F7
    31. Tertiary, 41. Vocational, 51. Other (specify).
```

This question is asked only of respondents who are still attending school at the time of the census. Mark the correct box to show the level of education this person is currently attending. For example, if the respondent reports that she is currently doing Form 2 in EBS, then mark the box 22.

## P17. Can <name> read and write a simple sentence in one or more of the following languages?

This question is asking whether the person can read and write in English, Kiribati and in other languages. This question is asked of those people who have left school and those who have never been to any school. Note that it does not ask whether they can speak it. Note also that there is no methodology of testing used but relies on the question being asked to the respondent and their response to the question. This is an indirect way of measuring literacy.
Mark the appropriate box according to the respondents answer.

## QUESTIONS P18 TO P19 APPLIES TO ALL PERSONS AGED 10 YEARS AND OVER

## P18. Does <name> play any sport?

| P18. Does <name>play any sport? | $1 \square$ Yes |
| :--- | :--- | :--- | :--- | :--- |

This question refers to any sport that the respondents might have been involved in for the last 2 weeks. Any sports such as volley ball, tennis, basketball, soccer, etc. Mark one box only.

## P19. Did <name> use the internet in the last week?

Access to internet services contribute to the person's exposure to influences outside his/her local place. It does not matter whether the person used internet for official or personal related matters. What matters is where the respondent have access to the internet most of the time. For instance, if the respondents report that he/she uses the internet most of the time in the office, then box 2 should be ticked. Please mark the correct box. Note that the reference period is last week. If the person did not use the internet in the last week, go to next question.

If the respondent reporting using the internet, mark the appropriate box then GO TO F1, fertility related question if female aged 12 years and over. If male aged $15+$, skip to question P20. Make sure to follow the correct skips as instructed.

## QUESTIONS F1 TO F5 APPLIES TO ALL WOMEN AGED 12 YEARS AND OVER

Questions F1 to F5 are asked only for women in the reproductive age group of 12-49. The purpose of these questions is to determine fertility and mortality level in the country.
This information is essential to policy makers in making estimates of the size of future populations of the country and the types of government services they might need.
Because of the sensitive nature of the questions and in order to capture the correct information on fertility and mortality level, these questions should be asked of the woman directly wherever possible. Because some of these questions deal with death of a child, some respondents may find it difficult to discuss these matters. Be sympathetic and patient with a woman who finds these questions to be sensitive. Explain to the women the purpose and the importance of the questions in order to gain her confident.

## F1. Has the women ever given birth, even if the child later died?

Every woman aged 15-49 should be asked this question in order to filter out those women who have not ever given birth.
This question refers to all live births even if the child died shortly after the birth or even if the child had died long time ago before the census. If the answer is "Yes", mark box number 1 then continue with F2. If "No", mark box 2 then skip to question P18.
Note that stillbirths are excluded from this question. Still birth is when a newborn infant does not show any sign of life at all.

F2. How many live born children of each sex, have in total been born to this woman?

F2. How many live born children of each sex, have in total been born to this woman?

This question asks about the total live births given by the woman including those births that were born alive but had died before the census. Note that stillbirths are excluded from this question. Record the total number of children that were born alive in the boxes provided. Write the total number of male and female in the corresponding boxes. Record the correct total number of children in the total box.

## F3. How many children of each sex have been born alive to this woman and were staying on census night in this household and elsewhere?

F3. How many children of each sex have been born alive to this woman and were staying on census night:

Fill in the number of sons and daughters who are alive during the census and live in the same household with the mother. Similarly record the number of those sons and daughters who are also alive but not living with the mother. Remember that the sons and daughters here refer to the woman's OWN natural (biological) children and not the foster children, adopted children, children of her husband by another woman or children of a relative.

## F4. How many children of each sex did this woman gave birth to who have died?

The question on children who have died is most critical to determine mortality level in the country. It is also one of the most difficult on which to obtain accurate data as the majority of mothers may fail to report their children who died very young.
Ask the question and if necessary, explain the purpose and the importance of this question to the respondent. Record the number of children of each sex who have died.
Note that after the completion of this question, you should go back and add the total number of births in Question F3 and F4 and to make sure that both totals should match the total births in question F2. If there is a discrepancy, make sure to correct it with the respondents before continuing on with the next question.

F5. What is the date of birth of this woman's last child born alive?

The purpose of this question is to determine when was the last time this woman had a live birth. Note that the last born could be the one that may have died. In this case put the date of birth of this child who has died as shown. If the last live birth is less than one year old fill in 000 in the box provided. At this stage, when you have completed all information for person 1 then go back to question $P 1$ to begin interviewing person 2. Follow the same steps until all members of the household have been interviewed. Then start with the Household Questionnaire.

QUESTIONS P20 TO P32 APPLIES TO ALL PERSONS AGED 15 YEARS AND OVER

## P20. Does <name> smoke?

| P20. Does names smoke? 1. Regular, 2. Sometimes, 3. Never, 4. No longer | $1 \quad \square$ | $2 \square$ | $\square$ | $\square$ |
| :--- | :--- | :--- | :--- | :--- |

This question applies to respondents aged 15 years and over. It is best to ask an individual in order to get a correct answer although sometimes it can be obtained by other members in the house. Note that this question is for any tobacco or cigarettes users. Any other form of smoking is not considered in this question. Mark the correct box according to the respondent's response.
Also explain to the respondent that smoking on a regular basis can refer to smoking everyday at different times of the day. For those who smoke sometimes will refer to those who do not smoke every day. Those who have never smoke before and during the census will be classified under response number 3 , while those who used to smoke but had stopped smoking will fall under the last group as "no longer".

## P21. Does <name> drink alcohol?

| P21. Does nname> drink alcohol? 1. Regular, 2. Sometimes, 3. Never, 4. No longer | $1 \quad \square \quad 2 \square$ | $\square$ |
| :--- | :--- | :--- | :--- | :--- |

Similar to the smoking question, ask the question above and mark the correct box

## P22. Does this person drink kava/yagona?

| P22. Does name drink kava/yagona 1. Regular, 2. Sometimes, 3. Never, 4. No longer | 1 | $\square$ | 2 | $\square$ | $\square$ | $\square$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Mark one box for the correct answer.

## P23. What is the highest level of educational qualification <name> has archieved?

The question refers to the highest level of education this person has achieved in any level of education. The highest level of education refers to the qualification that one obtained after the completion. For example, if the enumerator finds that the respondent has left school at Form 2 secondary school then the highest level of educational qualification should be 'primary leaving certificate'. This is so because the respondent has not yet archieved any secodary certificate yet.

Please record what the respondent report and mark the appropriate box accordingly. Note that for answers 1 to 4 skip to question P25. These group of people falling in these categories are not entitiled to be asked quesiton P24.

## P24. In what area/field/subject did <name> study?

P24. In what area/field/subject did <name>study?
(write field of education eg. law, computing, engineering, etc)

Question P24 should only be asked to those respondents who have completed higher than secondary education only. This is the subject area or field in which the person is qualified in e.g. accounting, science, law, economics, statistics etc. Otherwise if there are no special field that a person is studying such as these ones, write 'none'. Write the answer in the space provided.

## LABOUR FORCE QUESTIONS P25 TO P32

## P25. During the last week, did <name> do any work?

| P25. During the last week, did <name> do any work? | $1 \square$ Yes |
| :---: | :---: | :---: |
| If 'Yes' GO TO P27 $\quad$ If 'No' GO TO NEXT OUESTION |  |

The reference period here 'last week' refers to a week before the census night. In this case, it would be 01st to the $06{ }^{\text {th }}$ of November 2010.
Explain that "work" in this case refers to any kind of work/activity the person involved in most of the time in the last week in providing the necessities of life for himself/herself, his/her family or household. Anyone who was active last week, in any way, and spending most of their time in providing goods and services for themselves or for the household should be included. The following are the list of people who should answer "Yes" for this question:

- Those people who work for pay, who have their formal job and get paid at a regular time. These includes people who are employee (both in government or private), employers who are working for other people or companies, people who are self-employed who work for themselves in a formal private business which in the future will recruit other people to work for them.
- Those persons who do voluntary work but do not get paid, for example, teachers, nurses, etc working in this kind of arrangement.
- People who are doing unpaid family work
- Those who produce goods for sale informally, for example, a woman making local tobacco smoke and selling them in her own house.
- Those people who produce goods for own consumption, for example, those who cultivate babai, who fished, cut copra, grow garden, etc. These group of people should be recorded as doing work in the last week provided that they spend most of their time in doing so.

The following group of people who should be classified as not doing any work in the last week are:

- Full time students, who will be spending most of their time in school.
- People who are retired and too old to do any work, and therefore depends on other people.
- Those women/men who spent most of their time doing housework, such as cleaning the
house, cooking and looking after the household.
Mark the correct box and follow the skips accordingly.

## P26. During last week, did <name> have a job at which he/she did not work?

| P26. During the last week, did <name> have a job at which <br> he/she did not work? <br> If 'No' GO TO P30 | $1 \square$ Yes $2 \square$ No |
| :---: | :---: | :---: |

This question refers to those who have had a job but did not work last week for some reasons. A job here refers to the specific and main duty or responsibility that a person is expected or obliged to do. Mark the correct box corresponding to the answer provided by the respondent. If the person did not have a job during the last week, then skip to question P30.

## P27. What type of work/activity does this person usually do?

```
P27. What type of work/activity does <name> usually do?
    Work for pay : 1. Employee (government), 2. Employee (private),
            3. Employer, 4. Self-Employed
    5. Voluntary work
    6. Unpaid family work
    7. Producing goods for sale
    8. Producing goods for own consumption
\(1 \quad \square\) Emp (gov) \(\quad 2 \quad \square\) Emp (Priv)
\(3 \quad \square\) Employer \(\quad 4 \square\) Self-Emp
\(5 \quad \square\) Voluntary work
\(6 \square\) Unpaid family work
\(7 \square\) Producing goods for sale
\(8 \quad \square\) Producing goods for own cons.
```

This question is asked of persons who did any work and also reported to have a job in the last week. The question refers to the main work or activity the person usually does in which he/she work the most hours. Note that persons with two or more work or activities involved, the type of work/activity the person spent more time on should be recorded.

Work for pay: The first four categories under "work for pay" refers to work for pay which includes wages, salary, contract, commissions or operating a private business in which some kind of income is earned from.
Voluntary work: refers to providing work either to public or private sectors on voluntary basis or without income received.
Unpaid family work, which refers to those who spend time doing unpaid work for supporting their family.
Producing goods for sale mainly to support household. For instance work that involves farming, gardening, fishing, handicrafts, "nimoko", etc.. mainly for sales.
Producing goods mainly for household consumption refers to work to support the household, for example producing vegetables for the household or family consumption only and not for sale.

## P28. What is <name> main occupation?

P28. What is <name> main occupation?

Occupation refers to the type of work done in a job by the person employed, irrespective of the industry or the status in employment in which the person should be classified. Occupation here refers to the kind of work done by a person during the reference week. The occupation means the occupation which is regularly followed and to which the person devoted most of his/her working time. General or vague
entries are not satisfactory. The best short description of a person's occupation is usually his/her job title. For those who do unpaid family work, ask about the type of activity they mainly do or involve in supporting their family.
Avoid making vague entries such as manager, labourer, inspector, clerk, repairman etc. You should take some care in your description to give some idea of the level of skill or responsibility involved in the job and what function is performed. Two or more words should be used to describe an occupation properly e.g. shop manager, farm labourer, dock labourer, accounts clerk, police inspector, health inspector, car repairman, telephone repairman etc.
Avoid "inflating" job descriptions. For example, "engineer" is an occupation which requires a level of education and skill beyond that of "mechanic" where the occupation can usually be learned by apprenticeship or on the job. Someone who does machinery repairs is more likely to be described as "mechanic" that an "Engineer".

## P29. What is the main industry <name> works in?

P29. What is the main industry name> works in?
(if possible state the name of the employer) If 'Head' GO TO Household section

Industry here can refer to the person's place of work during the reference period (i.e. last week). Enumerators should give a precise description of the industry or type of business the respondent works for. This can be a company, firm, organization, institution or government department. If during the reference period, the respondent was temporarily away from his/her job, due to leave, illness, a labor dispute works etc. the industry should be he/she usually works for. Once again, in order to facilitate the work of the coders, and to obtain meaningful industry statistics, enumerators should describe the government department, company, firm, organization or institution as accurate as is possible. For instance, the industry of a fisherman catching fish for own consumption should be 'other fishing enterprises'. If the person is employed by the Government, write his or her department or ministry as his or her industry.
If possible, put the name of the employer/ company/department/organization/institution.

## P30. Did <name> actively look for work?

| P30. Did <name> actively look for work? If 'Yes' GO TO P32 | $1 \square$ Yes $2 \square$ No |
| :--- | :--- |

This question is a follow-up from P26. It should be asked of those people who do not have a job during the reference period but actively looking for a job. This question will identify the population in the working group that are not working but are actively looking for a job.

## P31. Why didn't <name> actively look for work?

This question is asked to those people who are able to work but did not look for any work for some reasons. Possible reasons for not looking for jobs have been coded from 1 to 8 as being shown in the questionnaire form. Mark the appropriate box as indicated.

## P32. Was <name> available to work?

| P32. Was <name> available to work? | $1 \square$ Yes $2 \square$ No |
| :--- | :--- |

This is to determine whether this particular person was willing and available to start work last week if a job had been offered to them. Ask the question and record the answer in the correct box.

## C. The Household Questions

> QUESTIONS H1 TO H18 APPLIES TO ALL HOUSEHOLD (Excl. Institutions)

The purpose of the household questions is to provide updated information on general characteristics of the population and the households. Questions included in the household will provide a picture of housing characteristics in Kiribati.
The household questionnaire applies to the household as a whole. The household questions are asked only once for each household and it is preferable to interview the head of the household. In cases where the head of the household is not available, then the spouse of the head of the household or the most senior member of the household can be interviewed. Also note that if there are more than 6 persons in the household, you only need to fill the household questions once only on the first page of the questionnaire and leave household section in the extra form(s) blank.
A household in this case is defined as "Those persons who usually eat together and share the work of preparing the food and/or the cost of work of providing it.
H1. Type of living quarters

| H1. Type of living quarters |  |  |
| :--- | :--- | :--- |
| $1 \square$ One family house detached | $2 \square$ One family house attached | $3 \square$ Building with two or |
| from any other house |  |  |

## Only 1 box should be marked

This question refers to the type of living quarters this household are living in. The answers are provided as shown: Also in this case, you can use your observation to confirm the answers that are provided. The following clarifications apply to the above categories 1 to 7 :

- Category 1: "A one family house detached from any other house", is a dwelling for a single household. It is not joined to any other dwelling by one or more walls and is not in a building used also as a shop or a factory.

Category 2: "A one family house attached to one or more houses", is a dwelling, which shares a common wall with one or two other dwellings.

- Category 3: "A building consisting of two or more apartments", may be a block of flats, an apartment building or a set of town houses.
- Category 4: "A building with two or more households which shares a kitchen or toilet" is selfexplanatory.
- Category 5: "A dwelling attached to a shop or other non-residential building".

Households sometimes live in dwellings above their shops or dwellings attached to factories or workshops.

- Category 6: "A lodging house" is like a hostel where people either share rooms or have separate rooms but share either cooking or washing facilities.

## H2. Housing and Lands

## Only 1 box should be marked

H2a:
This question refers to the main house. The question should be asked, as "How is the main house constructed? By 'Main House' we mean the biggest house whereby most of the household members usually sleep at night or what the head of the household considers as the main house. Sometimes you can identify how the main house is constructed by just looking at it without asking. If you are not sure, ask the question.
Record and mark the box as shown with explanatory below:

1. Permanent - iron/aluminum roofing with concrete/masonite walls
2. Local - all housing structure are of local materials
3. Combination - house constructed of local and permanent materials.
4. Other - other materials apart from the above.

## H2b:

The question will determine the owner of the house. As such the question should be asked as "Who owns the house?" Mark the correct box shown above according to the answer provided by the head of the household.

1. Government - houses that owned by the Kiribati Housing Corporation. Most of these houses are found in South Tarawa where most civil servants lived in.
2. Council - these are houses owned by island councils in outer islands.
3. Private own - these are private houses owned by individuals, can be in South Tarawa and outer islands.
4. Private rent - refer to people living to houses belong to other people and therefore have some kind of payment arrangement or agreement to be done on a regular basis.
5. Other - can refer to those living in houses that not owned by themselves and the above category.
H2c:
This question is asked, "Who owns the land on which the main house is built?" Ownership or Right of the land on which the main house is built can be;
6. Own - if either the families of the head of the household or spouse owns the land.
7. Government Lease - if the head/spouse sub-leases the land from government or from the island councils.
8. Private Lease - if the head or spouse leases the land from a private owner, even if the owner is related to them.
9. Personal agreement - if the head or spouse do not own the land but stays under some kind of arrangement and agreement between them and the owner of the land.
10. Other - if the ownership of the land is other than those mentioned above.

## H2d:

## Only 1 box should be marked

Ask about the number of years since the main building was completed and enter the answer in the box provided.

## H3 Main construction materials used \& number of rooms for housing.

| H3. Main material used for: | Wood/ Masonite | Metal/ iron/aluminum | Concrete, cement, brick | Traditional materials | Other |
| :---: | :---: | :---: | :---: | :---: | :---: |
| a. Construction of walls | $1 \square$ | $2 \square$ | $3 \square$ | $4 \square$ | $5 \square$ |
| b. Construction of floor | $1 \square$ | 2 | 3 | 4 | 5 |
| c. Construction of roof | $1 \square$ | $2 \square$ | $3 \square$ |  | $5 \square$ |
| d. Number of rooms? | $2 \square 3$ | $4 \square 5+\square$ |  |  |  |

## Only 1 box should be marked for each row.

H3a-c:
The three questions refer to the main material used in construction of walls, floor and roof of the main house. Mark the appropriate box corresponding to the answer provided. Note that you can physically observe the house and record the answer straight away without asking the questions. Remember to mark one box only for each question. In cases where there are more than one houses, ask for the main house and record the correct answer accordingly.
H3d:
The purpose of this question is to identify overcrowding in the household which is associated to health of household members particulars to children. The question refers to rooms or places where household members use for sleep or eat. This does not include toilets and bathrooms. In cases where a household has several "kiakia" used for sleeping, these can be counted as rooms. Ask the total number of rooms and mark the right box as shown.

## H4. Cash crops grown

| H4. Does this household grow? (Check box) | near by | else- <br> where |  | near by | elsewhere |
| :---: | :---: | :---: | :---: | :---: | :---: |
| a. Breadfruit | $\square$ | $\square$ | b. Te bero |  | $\square$ |
| c. Babai |  |  | d. Te kaina |  |  |
| e. Banana |  |  | f. Coconut dwarf |  |  |
| g. Pawpaw |  |  | h. Coconut local |  |  |
| i. Sweet potatoes |  |  | j. Cabbage |  |  |
| k . Doest this household cut toddy? |  | $\square$ | 1. Other |  |  |

## Only 1 box should be marked

The interest here is the food crops or trees the household has in its vicinity or somewhere out in the bush. What is important is the access of the household to such food crops or trees i.e. can they access and use them or not. ELSEWHERE is limited within the island i.e. only the food crops or trees who are accessible on the island not outside the island where the household is located.

Mark one box corresponding to the answer provided.

## H5. Livestocks and Pets

| H5. Livestocks and pets? <br> a. how many pigs does this HH have? <br> b. how many chickens does this HH have? | local breed | cross breed | exotic |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | c. how many dogs? |  |
|  |  |  |  |  |  |

We need to know the number of different types of livestock and pets the household has. If a household has no pigs or chickens write '000' in the appropriate box. The types of livestock should be identified as local breed, cross-breed and exortic. Cross breed refer to the offspring of local and exotic or overseas species(pigs or chickens). Exotic here means species (pigs or chickens) introduced from outside Kiribati. Also record the number of dogs this household have in the box provided.

## H6. CAPITAL GOODS: How many does this household own in good order?

Information collected on the ownership of some capital goods in the household provides rough measure of socioeconomic status of the household. Notice that each item should be in a good condition and is working at the time of the census. If an item is not working but will be repaired soon then records it as working. Enter the number of item in each box corresponding to what the respondents reported to you.

## H7. Waste Disposal?

H7. Main form of Household solid waste disposal
$1 \square$ Road side point
$5 \square$ Ground pit (te marua)
$2 \square$ Community pile point
$6 \square$ Burn
3Beach
4 $\square$ Sea

In this question, ask about the main place where the household dispose their rubbish to. The location of waste disposal have health implications. Mark the correct box according to the answer provided by the head of the household.

## H8. Main source of cooking energy?

| H8. Main source of cooking energy |  |  |  |
| :---: | :--- | :--- | :--- |
| 1 | $\square$ Copra mill residual | $2 \square$ Kerosene | 3 |
| $4 \square$ Gas Wood/coconut shells |  |  |  |
| 4 | $5 \square$ Other | 6 | $\square$ Electricity |

## Only 1 box should be marked

Information on the type of source of cooking energy is collected as another measure of the socioeconomic status of the household. The use of some cooking sources can also have adverse health consequences. Remember that this question asks about the main source used for cooking. Ask which of the following is the main source of cooking energy used in this household at most times. Note that the household could use several sources, however what is required here is the source which used most in the household. Mark one box only for the correct answer.

## H9. Main source of lightning?

```
H9. Main source of lightining
    1 Solar 2
    P
5\squareOther
```

Mark one box only for the main source of lightning used in this household. Remember that the household could have several source of lightning, what is required is the main source in which the household used most of the times.

## H10. Main source of drinking water?

| H10. Main source of drinking water |  |  |  |  |
| :---: | :---: | :--- | :--- | :--- |
| 1 | $\square$ Rain water tank | 2 | $\square$ Pipe system (PUB) | 3 |
| 4 | $\square$ Protected well water | $5 \square$ Bottle water (shop) | $6 \quad \square$ Other well water |  |

## Only 1 box should be marked

The importance of asking this question is to assess the cleanliness of the household drinking water by asking about the household's main source of water. If drinking water is obtained from several sources, try to determine the source from which the household obtains the majority of its drinking water. As instructed mark one box only for an answer.

## H11. Main source of washing water?

Similarly, this question is used to assess the cleanliness of the source of water to which the household mainly used for washing. The source of washing water has health implications to household members. Mark one box only for the answer accordingly.

## H12. Does this household catch fish by?

| H12. Does this household catch fish by? (1. Yes, 2.No) |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| a. Collection (lagoon \& reef) $1 \square$ $2 \square$ b. Collection on ocean $1 \square$ $2 \square$ <br> c. Lagoon fishing $1 \square$ $2 \square$ d. Ocean fishing $1 \square$ $2 \square$ <br> e. Reef fishing $1 \square$ $2 \square$    |

The purpose of this question is to determine how and where the household usually catch fish for both own consumption and for commercial use. Ask each separate method and mark the box according to the answers provided.
a. Collecting on lagoon and reef - involves all collection methods on the lagoon and reef for example, kaibun, nouo, werewere, kiika
b. Collecting on ocean flat - involves all collection methods on the ocean for example, nimatanin, kiika, etc.
c. Lagoon fishing - involves fishing net (karaun, tabon ao, katebe, roaroa, karekare.
d. Ocean fishing - involves katiki, roa, kabwara, etc..
e. Reef fishing - involves karaun, tabon ao, katebe, roaroa, etc.

## H13. Main toilet facility

H13. Main toilet facility

| $1 \square$ Flush toilet pub system | $2 \square$ Flush toilet own septic | 3 | $\square$ Pit latrine | $4 \square$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $5 \square$ Atollete/kamkamka | $6 \square$ Sea | $7 \square$ Bush | $8 \square$ Other |  |

## Only 1 box should be marked

The main purpose of this question is to obtain a measure of the sanitation level of the household, since toilet facilities are important for disease control and health improvement. Ask for the main toilet facility if the household uses more than one toilet facility. Below are some definitions for the answer categories as shown above:

1. Flush toilet to pub system: A flush toilet which uses a cistern or holding tank for flushing water and connected to toilet public system where excreta are disposed.
2. Flush toilet own septic: A flush toilet which uses a cistern or holding tank for flushing water and connected to own ground septic system.
3. Pit latrine is where excreta is deposited without flushing directly into a hole in the ground.
4. Beach
5. Atollete/kamkamka: refers to
6. Sea
7. Bush
8. Other

## H14. Does this household have a seawall?

H14. Does this household have a seawall? $1 \square$ Yes $\quad 2 \square$ No

## Only 1 box should be marked

Mark one box for each answer category according to the answer provided by the head of the household or any senior member of the household.

## H15. Does this household segregate (separate organic, inorganic and recyclable waste) its solid waste before collection by the council?

H15. Does this household segregate (separate organic, inorganic and recyclable waste) its solid waste before collection by the council?
1
$\square$ Yes $\square$ No

The question is asked if household separate their solid waste before disposing them at the collection site. There are 3 different ways mentioned in the question:

- organic waste are those waste from dead animals or plants for example, dead tree leaves from breadfruits, coconut trees, etc..,
- inorganic wastes are waste composed of material other than plant or animal matter, such as sand, dust, glass and any man made product which cannot be recycled.
- recyclable waste are those waste that can be recycled, eg. Plastic bottles, plastic cans, etc.. Mark one box for an answer.

## H16. Household Cash inflow?

The question is trying to determine whether any member of the household receive any cash income from the sources listed or not. The answer can assist in indicating the welfare status of the household. Ask the question and record the answer for each category.

H17. Have any residents of this household died during the last $\mathbf{3}$ years?

Question H 17 serve two purposes; 1. To determine the level of mortality and 2. To estimate the level of maternal mortality in the country, i.e. death related to pregnancy. The question refers to any member of
the household died during the last 3 years. Note the time period which refers to the last 12 months preceding the census. If there is any death occurred during this period, then make certain that you provide the detail information for each death. Fill in the sex of the deceased member, the age and date of birth. For any female within the age 15-49 at the time of death make sure to provide the following information required as whether the woman died when she was pregnant, giving birth or died within 6 weeks at the end of a pregnancy or childbirth. The last part of this question is important to enable the calculation of maternal mortality.

## D. Signing off the Questionnaire

| Total persons enumerated in this HH |  | Name | Signature | Date |
| :---: | :---: | :---: | :---: | :---: |
| MALES | Interview Completed (Enumerator) |  |  |  |
| FEMALES | Form Checked (Supervisor) |  |  |  |
| TOTAL | Form checked (Office editor) |  |  |  |

At this stage, the interviewer should go back again and check the followings:

- All household members are recorded including small children, disabled and old people.
- That all questions are been answered correctly and that all answers are neat and readable.
- Thank the head of the household for their cooperation.

Once the enumerator is certain that everything is acceptable, the next step is to fill up the table shown above. Record the total males and females separately on the boxes provided then record the total for all members. The number of males and females should be equal to the total. When satisfied with everything, the interviewer should write his/her name in the space provided, sign the form and enter the date of completion. The two spaces provided are for the supervisor and office editor's sign for their approval and confirmation that the questionnaire is in order.
appendix 1:

## Appendix 4: Sample of an EA Map (part of Betio)

## APPENDIX 5: Land Area of islands in Kiribati

Land areas shown below are the same as those in the 1985 Census Report (Vol 1), except the Bairiki Betio Causeway area which is added here for the first time. The maps used for measurement were:
British Directorate of Overseas surveys, from 1968 aerial photography.

| 1: | 12,500 | Marakei |
| :--- | :--- | :--- |
| 1: | 25,000 | Makin, Butaritari, Maiana, KUria, Beru, Nikunau. |
| 1: | 50,000 | Christmas |
| 1: | 2,500 | South Tarawa |

Lands and Surveys Department, Tarawa from 1968 aerial photography.

| 1: | 5,000 | Tamana |
| :--- | :--- | :--- |
| 1: | 10,000 | Aranuka |
| 1: | 50,000 | Abemama, Nonouti, Tabiteuea, Abaiang, Onotoa |
| 1: | 75,000 | North Tarawa |

British Phosphate Commission surveys - Banaba
Survey by Lands Commissioner, 1951 - Arorae
Fanning Plantations survey, 1918 - Washington
Unknown origin and date - Fanning
Naval Intelligence Division Geographical Handbook - South Line Group
Uncertain sources - Phoenix Group

Lands above the apparent mean high water mark is listed and includes mangrove swamps, sand pits, uninhabited islets and areas of water completely enclosed by land unless described as 'not included'. The term "Ass.Is" means one or more unnamed islets associated with the proceeding named islet.
Areas are in acres, with total converted to sq.kilometres
(247.1 acres = 1 sq. Kilometres)

[^0]:    ${ }^{1}$ The original idea behind this kind of appointments is to develop the experience, skill, and confidence of NSO staff in managing and conducting large scale statistical undertakings.

[^1]:    ${ }^{2}$ According to the Census Act, the census should be conducted every 5 years and all expenses should be charged to the Consolidated Fund. This effectively means that once appointed, the census commissioner can incur expenses related to the population census and charge these to the Consolidated Fund, i.e. there is no need to wait for "external funds" or a prodoc to be approved.

[^2]:    ${ }^{3}$ Ideally the census preparation should start two years before the enumeration date in order to plan and execute the various stages of the census properly. Doing things in a hurry is bound to produce inaccurate results.

[^3]:    ${ }^{4}$ In theory the enumeration should correspond exactly with the date and time designated as the census date, i.e. instantaneous, otherwise the census or the count would not be a simultaneous count, and double counting could occur. Hence the idea is to conduct the enumeration as fast as practically possible, say within a day or two - but in practice this could take up to five days or more.

[^4]:    ${ }^{5}$ With some minor editing done by lete Rouatu.

[^5]:    ${ }^{6}$ An engine and sailing ship that often visited Christmas island from Honolulu bringing in goods and supplies. Sometimes this ship visited Tabuaeran and Teraina. Kiribati people in the Line islands often use this ship to travel to the other islands.

[^6]:    ${ }^{7}$ MV Moamoa is the CPPL vessel that usually goes to Christmas island carrying cargoes from Tarawa.

[^7]:    ${ }^{8}$ That is why it is advised that you fill all questions P1 to P3 before proceeding with the rest of the questions.
